

# The latest update on Windows 7 fails, which may cause your computer to lose copyright

Microsoft recently released a new monthly update with Windows 7 KB4480970 and Windows 7 KB4480960 codes. But according to feedback from Windows 7 users as well as Microsoft, this update has caused some devices to lose copyright.

Microsoft recently released a new monthly update with Windows 7 KB4480970 and Windows 7 KB4480960 codes. But according to feedback from Windows 7 users as well as Microsoft, this update has caused some devices to lose copyright. Specifically, your computer will fall into the state of not activating the copyright and the message "This copy of Windows is not genuine".

According to Microsoft, its copyright management service has had a problem with this update. In its support document, Microsoft also issued a notification about this incident. Specifically, after the update, some devices may experience KMS activation errors that make Windows 7 on the device become a non-copyrighted version with code 0xc004f200.

In addition to copyright activation issues, the latest Microsoft update also causes network problems for some devices after the update.

Currently, Microsoft is trying to deploy a patch. During this time, in order to avoid such unfortunate situation, users should not turn on Windows Update on Windows 7.
