

The most beautiful lakes of death in the world

Blue water in England or bright red in Tanzania forms beautiful lakes but contains deadly toxins.

The lake with the name of the lake of death will make us think of death, and the danger. But the lakes below are also death lake, but are considered natural masterpieces that nature has bestowed on us. Blue water in England or bright red in Tanzania forms beautiful lakes but contains deadly toxins. Here are **9 death lake lakes** called the most beautiful lake of death in the world.

The lake in Harpur Hill village, Derbyshire county, central England is unusually blue, creating a poetic beauty. However, the reservoir contains a lot of waste from old cars, plastic garbage and human waste, with a pH of up to 11.3, a little less than bleach with a pH of 12.6, much higher than the average pH. average 6-7. The green of the lake is made up of calcium crystals absorbed from the surrounding limestone mountains, as the lake is located in the old limestone quarry site. Local authorities warn people not to interact with lake water, because the pH is high enough to irritate the skin and eyes, as well as cause stomach and fungal diseases. Photo: F Stop Press

Lake Ljen in Banyuwangi district, East Java province, Indonesia. The lake is located in a large crater, one kilometer wide, eye-catching turquoise. This is one of the highest acidic volcanic lakes in the world. PH at the lake is 0.5; in the middle of the lake is 0.13 due to high sulfuric acid concentration. The acid content here is so dense that it can disappear everything. Around the lake is a sulfur mining site. Photo: Bromoeastjava

Lake Berkeley Pit in Butte, Montana, is famous as the "deadliest lake in America". More than 151 m³ of reservoir water is filled with heavy metals and sulfuric acid. In early December, 10,000 dead geese were paralyzed in the lake for drinking contaminated water. Photo: Amusing Planet

According to Live Science, Lake Natron in northern Tanzania has a pH of 10.5, which can burn skin and eyes. The lake is bright red due to its high salt content, an ideal environment for Halophile, microorganisms that produce red pigment when photosynthesis and development. Sodium carbonate, which is often used by ancient Egyptians to embalm and other minerals that flow into the lake from surrounding hills, makes the lake highly alkaline, not suitable for living animals.
