

The most bizarre inventions CES 2019

At the five-handed CES, we saw 8K screens with extremely large sizes, futuristic autonomous cars, automation robots, smart home appliances, and many other interesting products. But besides that, there are also a lot of quirky 'technological toys' that have been brought to the event.

CES (Consumer Electronics Show) - The annual consumer electronics exhibition in early January (this year is January 8-11), is a major event of the technology world. Like the tradition that has existed for many years, CES 2019 also contains something very interesting, extraordinary, creative, and oddly missing.

At the five-handed CES, we saw 8K screens with extremely large sizes, futuristic autonomous cars, automation robots, smart home appliances, and many other interesting products. But besides that, there are also a lot of quirky 'technological toys' that have been brought to this event. Let's take a look at what strange things are at CES 2019!

1. What is CES? Why is the tech world boiling for CES?

The most exotic products CES 2019

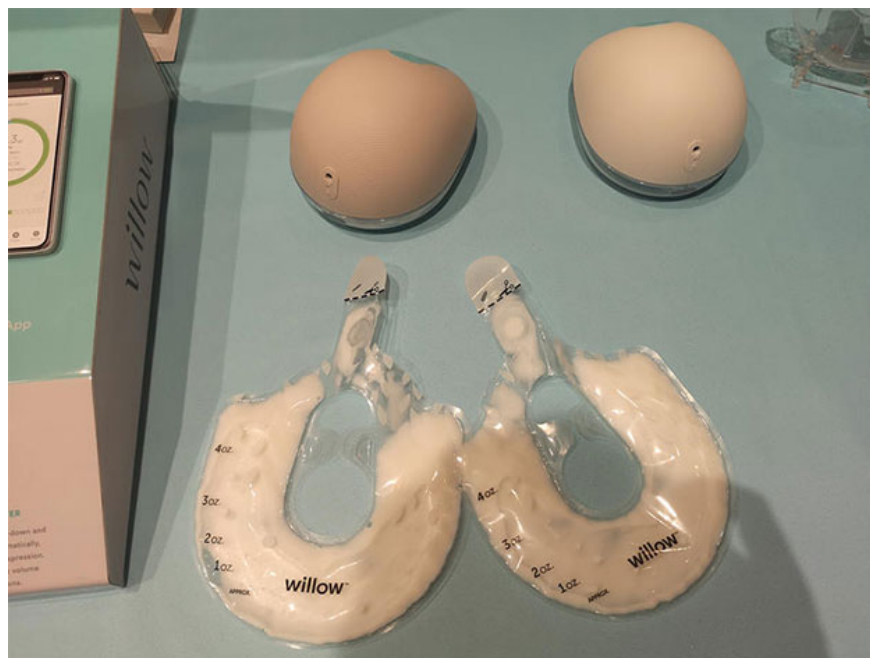

1. Robot plays table tennis
2. Smart breast pump
3. Smart dumbbells
4. Robot for lonely people
5. Sleepy robot
6. Wearing device helps reduce stress
7. Smart toilet of Kohler
8. MUI smart screen
9. Smart treadmill for cats
10. Lamborghini massage chair
11. Smart toilets for dogs.
12. Equipment to create applause
13. Babyeyes camcorder
14. Pigzbe money management machine
15. DrinkShift smart refrigerator
16. Solar Cow battery charger
17. BreadBot bread machine
18. Qoobo pet robot

Robot plays table tennis

The big guy who looked as if he had just stepped out of these fictional movies was actually a professional table tennis player. In addition to the main task of defeating all amateur 'table tennis athletes' at CES, he can record every movement of his opponent, then carefully analyze those movements to find points. weak and exploit this weakness. At the same time, it is also possible to help the opponent practice to overcome weaknesses step by step. It is unclear whether this ping pong robot is sold on a commercial scale, but if it does, then the ping-pong coaches will have to sit idly by!

Smart breast pump

This is probably not something you can see every day: A smart, hands-free breast pump, allowing mothers to have an easier day when not always worrying about squeezing. How milk or milk storage.

This machine actually consists of two cups, and the mechanism of action is simply to slip inside a bra, and the mother can freely roam around, do housework while the device does the work of me

Not only that, this smart breast pump also comes with an iOS / Android app to help mothers keep track of how much milk has been sucked and manage storage regimens (milk is stored inside bags. Small, can freeze or freeze).Very smart!

Smart dumbbells

Is it too early to think about liquidating all the rough, dusty and always rolling weights at gyms and replacing them with this device?

True to its name, this smart dumbbell will be able to track your health indicators, and your workout time via an application that is connected to the smartphone. Moreover, you can also change its weight from 6kg to 20kg, so there is no need to buy many weights with different weight levels. The device has a handle and shape like a normal kettlebell weight, except that this dumbbell runs on a battery with traditional barbell running on 'rice' - A dream for exercise enthusiasts but not much time.

Robot for lonely people

This companion robot, named Lovot, carries on its noble mission to help people feel less alone. Lovot will have the same actions and gestures as the pet bones. Lovot is self-consciously hanging around you, waving his soft wings when he wants to be held and hugged, and a camera mounted on Lovot's head will help him to recognize his master and make eye contact with those around him. . all these things just let you feel your life less boring.

Sleepy robot

'Oversized peanut seeds' wrapped in a layer of cloth can gather information and mimic the pace of the breath, thereby helping you to fall asleep and sleep better, sounds good. !

The US-based high-end home appliance company Kohler claims that it has created the world's smartest toilet system, most notably the Numi 2.0 smart toilet. This futuristic device provides personal settings that allow users to adjust every option equipped on their toilet according to their exact preferences, from ambient light color to ability to synchronize music. Through Bluetooth integrated surround sound and wireless technologies for heating up pedestals and footrests. With this modern toilet, you can play your favorite music and podcasts through wireless broadcast settings with any device connected by Bluetooth technology, as well as storing MP3 files to an SD card or Plug your device in with the auxiliary cable.

Not only that, Numi 2.0 also integrates the Amazon Alexa virtual assistant so you can do more while using the toilet. Perhaps in the future, when Kohler's smart toilets are in common use, it is likely that mankind will have to spend more time on 'this kind of routine work' by simple, yes Too many cool things to keep us!

MUI smart screen

A wooden panel is connected and used as a smart touch screen. This device comes with touch control functions and intuitive data display such as thermostats, weather information, brightness control controls and even access to your voicemail, copper Time to make your room more elegant. But the most interesting thing is that the device is expected to cost up to \$ 1,000 (£ 785).

Smart treadmill for cats

Is your pet cat overweight? If so, you should persuade him to use this The Little Cat treadmill - a true fitness device for oversized cats. The device has LED lights in the middle of the track to make your cat feel more excited. Oh, well, before the cat can reduce the fat, your wallet may have been lighter as the device is priced at \$ 1,800 !!! I do not know what you think, but for me, maybe I will try to build a new menu for my cat.

Lamborghini massage chair

First, it can be confirmed that you can absolutely buy a real car with a lower price than this expensive massage chair. But, this chair is not for the poor, it is priced at up to \$ 30,000. However, it must be said again, not naturally Lamborghini massage chairs are so expensive. The product uses advanced skin options, body massage experience, heart rate measurement, monitoring your health status and then customize the massage program for you. Oh yes, it also has a relaxing light system and smart design for many poses and figures. But after all, I still feel that the \$ 30,000 price doesn't seem to be very good.

Smart toilets for dogs

Above we have a treadmill for cats, so there's no reason to be surprised at the smart toilet for dogs. You can take your dog for a walk for him to "clean himself", or if conditions permit, you can spend \$ 1,200 for this smart toilet. The product is advertised as the world's first fully automated pet toilet. After your four-legged friend finishes his job, the bottom of the toilet will emerge and collect the waste into a small plastic bag, which is then 'sealed' carefully so that you can discard it still ensure hygiene.

Equipment to create applause

In addition to its main use as its name is to create brittle applause, this device also serves as 'fuel for nightmares'. When you start, not just the mouths of these birds start to clap, but the hands on its head also pat, and it will start to 'talk' to you with a face that is not so cute. The good news is that this device has no legs, so you

can run away.Run quickly.

Babyeyes camcorder

You can no longer keep any memories from your childhood in your crib, but Babeyes will change that. What is the solution here? It's a mini camera that can be worn on your baby (or next to the bed, crib), and it will start recording videos when parents (ie you) enter the frame. The idea behind the \$ 139 camera is expected to be officially released later this month is that it will help capture the moments of love and fun of children with their parents to keep as a memory that they can review many years later, when grown up. It sounds worth it!

Pigzbe money management machine

Pigzbe wants to teach your children about the meaning of money and how to manage allowances. But that allowance will be converted to an electronic currency called Wollo. It sounds a bit more complicated than buying a piggy bank ?! Pigzbe's inventors argue that we are living in an age where cash and coins are becoming less common, and though Pigzbe's approach is perfectly reasonable, it must also be Review a little about the feasibility of actual use. Imagine that you have to explain the fluctuation value of electronic money for a six-year-old child. It sounds a bit hard! However, many people still believe in the feasibility and effectiveness that Pigzbe will bring. The product is expected to be officially released in June at a price of 99 USD.

DrinkShift smart refrigerator

Have you ever come home after a tiring day, planning to open the refrigerator and find a bottle of beer to drink cool, then stunned to find that the beer bottle you put in the refrigerator last night was someone else's, while now having to run to the grocery store is too guilty!

DrinkShift will help you avoid such situations by allowing you to monitor the status of drinks stored in the cupboard. DrinkShift is rather a system of two separate parts. Hardware is a refrigerator, can accommodate more than a dozen bottles of beer, drinks of all kinds. Software is a companion application, which helps you monitor the status of beverages stored in a remote cabinet. When you take a bottle of beer out of the refrigerator, the app will mark it and when the drinks are out, the app will also send a notification.

Convenient and useful, however, there are also two major problems with DrinkShift. First, you'll have to buy a mini fridge, which is a big investment in storing and tracking 12 beer bottles. Secondly, the whole system basically ensures you will never have enough beer in the house, why say so? This may sound good in theory but can also lead to some serious alcoholism.

Solar Cow battery charger

Ignoring all the skepticism, Solar Cow can be considered one of the most amazing and potential inventions we have seen at CES 2019, it is really not only strange, but also amazing. .

Solar Cow is essentially a giant portable battery charger. In many areas of the world, where poverty is widespread, or areas divided by natural disasters and war, smart phones are still surprisingly popular (that's why Android Go exist). However, in these areas, electricity is not so popular, so smartphone users sometimes have to walk miles from their homes to some public area just to charge them. The worse thing is that they often have to pay for the device's charge, which is a huge burden for those who already have no income.

Meanwhile, Enter Solar Cow, using solar energy to charge small white batteries looks like milk cartons. People can remove a battery pack and use it to charge their device. When finished using, just put that battery pack back to the original position to use for the next time. The battery packs themselves will also be designed to be unusable on any device except Solar Cow that they link to help prevent theft and misplacement.

This device is very useful and great, but we have to admit that the stainless steel cow with its batteries represents the breast to look silly and weird!

BreadBot bread machine

Well, what do you think about a machine that can create ten loaves of bread every hour and handle the whole process from processing bread mixes to cooking and cooling the loaves in a perfectly clean model and closed? Now we will talk about such a machine!

Of course, BreadBot is not a device for households. It aims to be used in more grocery stores, where customers can grab a fresh loaf of bread directly from the BreadBot oven and take it home. BreadBot can help grocery stores cut down on related expenses such as cleaning and hiring staff, as well as providing shoppers with more convenient and enjoyable buying and selling experiences.

Qoobo pet robot

If you want to have the joy of owning a pet and don't want to have any trouble raising a real cat or dog, Qoobo may be the product for you.

This 'electronic tail pillow' will act as a family pet. It can wave its tail, move around in response to the owner's gestures. You can feed Qoobo pet, pat and hug it, and the device will respond as if it were a cat or a dog wagging its tail obediently.

Although Qoobo sounds quite feasible on paper (it has the advantage of a cat that does not defecate indiscriminately, does not clam all day or sheds hair everywhere), but for sensitive people it looks like Qoobo seems quite scary. This feathered pillow has a wagging tail that looks like a real animal, although no face, eyes, mouth, feet .

These are very interesting products, cute and equally oddly introduced at CES 2019. In addition to the famous inventions, it is these interesting products that are also a factor to create dense. special in CES seasons. Hopefully at CES 2020, we can still witness more such products.
