

The most remarkable smartphone models 5G will be released in February, who will lead the game?

Mobile World Congress, one of the most important events in the smartphone world will open on February 25 in Barcelona will bring surprises?

Mobile World Congress, one of the most important events in the smartphone world, will kick off on February 25 in Barcelona. Besides the foldable phones and on-screen built-in cameras, another well-anticipated trend that we will definitely see at this year's event is 5G.

Rather than discussing the trials and 'sweet' promises of fast internet speeds in the future, we will be touching new 5G models at Mobile World Congress, and more importantly, These are all strategic products of major smartphone manufacturers in 2019.

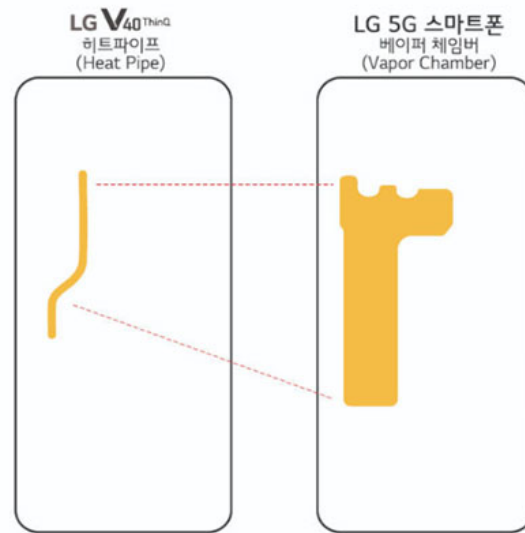

1. This may be the future smartphone: No 'holes', no ports, no wires and no buttons

Today, January 27, two major smartphone makers, LG and Huawei, confirmed that they will launch their important 5G devices at the upcoming Mobile World Congress. In it, LG will definitely bring this event to its first 5G flagship, most likely a G series device.

It is not clear if this is a variant of the LG G8 (also likely to be released at the event) or a completely different device. However, the product specifications have been leaked for several months: The smartphone will be powered by the latest and highest-end chip from Qualcomm, Snapdragon 855. In addition, it also There will be 4.000mAh battery and especially the advanced steam chamber radiator system, for better cooling capacity than

today's popular systems. Specifically, this system is made up of heat pipes (see diagram below) to cool the device, ensuring performance when working with heavy tasks for a long time.

1. Will LG G8 be equipped with 2 screens?

For other information from LG, the company recently released a suggested video of a new, non-touch user interface for its devices. Details of this interface have yet to be revealed.

Huawei will also introduce its first 5G phone at this year's show, the information was announced by the manufacturer at an event in Beijing last Thursday. Not only that, Huawei will also incorporate mainstream trends in the smartphone industry this year into a single product, so this is likely to be a 5G, flagship and foldable flagship. fit the camera in the screen. In addition, no further details about the phone have been revealed, but it looks like it will be a separate device with the P30 Pro, expected to be released this year by Huawei, as well. maybe at MWC or shortly after that. From the end of last year until now, information about Samsung's foldable phones or Xiaomi has made a lot of observation by observers, and Huawei has the position of the world's second-largest smartphone manufacturer. Of course, I can't let myself be left behind.

Although it is still not possible to know any further details about Huawei's upcoming phone, one thing is for sure, the 5000 Balong - the 5G chip equipped on this phone will still be an Huawei homegrown product that can reach download speeds of up to 4.6Gbps or 6.5Gbps, depending on the spectrum used. Also, this chip is also used in home routers and other 5G devices manufactured by Huawei this year.

It is also impossible not to mention the world's number one smartphone manufacturer. Samsung is expected to launch the 5G variant of the flagship Galaxy S10 in 2019, although it is unclear whether this release will take place at the "Unpacked" event on February 20 ahead of MWC, or will take place at the end of the year.

1. Samsung Galaxy S10 will have 3 versions and this is the latest leaked image of this popular flagship model

Other major manufacturers such as Sony, OnePlus and Oppo will also be able to release or at least reveal more details about their 5G phones in MWC, although until now, still there are no information or rumors from these manufacturers.

Anyway, we can still confirm that 2019 will be the year to witness the rise of 5G in the smartphone world. A new 'arms race' of connectivity technology on smart phones is sparked, and finally we enter the era of ultra-fast mobile internet.

Let's wait and see, everything is still ahead!
