

The necessary precautions when using a front-loading washing machine

In order to help the item be more durable, prolong the life span, the way we use it every day will affect most, with the front door washing machine as well. The wrong habits will make the machine's ability to clean up and make the machine fail in certain parts.

In the process of using the washing machine, using it improperly will reduce the washing capacity of the machine, even if there are some errors that cannot be used. From the habit of using very small mistakes such as using the wrong type of washing powder, long clothes in the machine after washing, always cover the lid after use, pour fabric softener too dose, . also become one of the factors causing the machine's failure. Therefore, users need to pay attention to the daily routine of using washing machines to ensure the capacity and durability of the machine. The tips on using the front door washer below will help you get more useful information during use.

1. Use specialized detergent for washing machine:

You should use a detergent for a washing machine and only use it in a minimum amount (not the more you use, the higher the effect). Conventional detergents will give a lot of soap bubbles, and over time, they can bring a membrane in the tub as well as in water pipes, which will become a breeding ground for mold, can even cause Harmful to machines or electronic circuit boards.

Readers can refer to a number of washing machine products from various manufacturers sold at META.vn online shopping channel under the link below:

Read the packaging carefully, there are some washing powders marked as usable for washing machines, but they still produce a lot of foam, which is difficult to clean because the washing machine uses less water and therefore, no They should be used for their front-loading washing machines. It is impossible not to emphasize that in some cases, incorrect use of washing powder may even invalidate the machine's warranty.

2. Use less fabric softener:

Fabric softener should only be used with any type of clothing that is really necessary or use laundry detergents that have integrated fabric softener inside. Same for bleach (one tablespoon of concentrated bleach, two tablespoons for regular type). Remember, front-loading washing machines use less water so only a little liquid or bleach should be given.

3. Remove clothes immediately after washing:

Get out of your clothes as soon as you finish washing. Do not leave wet clothes for a long time, as this will provide an ideal environment for odors and mold and remember not to let children or pets climb inside the washing bucket.

4. Close the washing machine halfway:

When not in use, you should close the washing machine halfway, to improve the circulation in the machine and avoid mold accumulation.

5. Clean the rubber washer of the washing machine regularly:

Clean the washer gasket thoroughly with water and vinegar at a ratio of 1: 1. Eliminate hair or fabric because they bring a great home to mold, odor or dirty mud. Also, clean the inside of the tub with this way.

6. Cleaning machines every month:

For a regular monthly cleaning, pour some white vinegar instead of washing powder into the detergent box, and add a soda baking cup directly to the washing bucket (this will neutralize the pH and help rub the cage. wash).

Then, run the washing machine with the hottest mode.

In the case of extremely heavy mold odors, you can replace vinegar with bleach and run fast cycles with hot water. If the washing machine has a self-cleaning feature, read the user manual to use this feature.

7. Cleaning drainage pipes:

Clean the drain hose every few weeks or whenever you notice a problem with drainage, the machine vibrates a lot, the clothes are still wet after the last spin, the washing time is longer than usual or stop Unusual in the washing cycle. Hair, cloth or other pieces of material may be clogged in the drainage pump filter, resulting in longer drainage.

8. Appropriate spin speed:

Make sure the spinning speed you choose is appropriate for the volume of clothes you are washing. Higher rotating speeds mean more dry clothes before putting them in the dryer, but that means more wear on the internal parts of the machine, potentially shortening the life of the machine.
