

The new Acer all-in-one computer is unbelievably thin

Acer has bombarded this year's IFA Berlin with new devices and one of the highlights is the Acer Aspire S24 all-in-one.

Acer has bombarded this year's IFA Berlin with new devices and one of the highlights is the Acer Aspire S24 all-in-one.

Aspire S24 has a 23.8-inch screen, only 0.23 inches (5.97mm) thin and looks just like a normal computer screen. Just looking at it is hard to think of it as a computer.

Black and gold can hardly be considered suitable for everyone, but it doesn't deny its elegance anyway. Not only is it thin, the 2.7mm left and side bezel (thicker lower edges) are the factors that make this machine one of the best all-in-one computers on the market.

The device was thin but not "light" at all

Acer also brings some other interesting things like built-in wireless charger so you can charge your phone just by placing it on the computer body.

Despite being slim, Acer Aspire S24 is still equipped with very powerful hardware, including Intel's 8th generation core processor, SSD up to 256GB and HDD of 2TB capacity. The exact parameters will vary slightly

by region.

The Acer Aspire S24 will be available in the US in January 2018 at an initial price of \$ 999. The machine will arrive sooner in EMEA countries around November 2017 with an initial price of 999 euros.
