

The new PC Kano toolkit allows children to build their own Windows 10 laptops

Kano PC, a company specializing in the design and manufacture of low-cost computer models for education, helps children become familiar with hardware configuration and encryption, recently partnered with Microsoft to produce eye a Windows 10 laptop model according to modular model.

Kano PC, a company specializing in the design and manufacture of low-cost computer models for education, helps children become familiar with hardware configuration and encryption, recently partnered with Microsoft to produce eye a model of Windows 10 laptop modeled, allowing children to learn how to assemble a computer system of their own.

Previously the assembly of a PC system was extremely difficult. Besides the lack of physical conditions, the cost of buying hardware components is not cheap, so it is almost impossible for children to practice assembling computers at schools. Instead, babies will often only get acquainted with the parts as well as the way of operating a computer-based computer system. This lack of practical experience makes the overall quality of the learning process significantly reduced.
