According to *Engadget*, NEC is about to unveil a 13.3-inch ultrabook model weighing only 999g. This product is named LaVie Z and can be launched this summer.

LaVie Z is advertised as using an aluminum-lithium frame that is 50% lighter than conventional aluminum used on other computer models. According to *PC Watch*, this is one of the lightest ultrabook models in the world.

The aluminum-lithium material used in LaVie Z's frame is 50% lighter than ultrabook's aluminum frame.(*Photo: PC Watch*).

Currently, the price, configuration and specific release time for this product are still unknown. This model is still in development.
