Alienware Aurora m7900

Alienware continues to make fans happy with 'super powerful' models and powerful processors. Aurora m7900 and Aurora mALX are the first laptop systems in the world to support two GeForce Go 7900 graphics processors that have just been unveiled at E3, Los Angeles.

Supporting nVidia's SLI technology, enabling the use of up to two graphics processors (GPUs) on the same laptop based on the nForce 4 SLI solution, gives graphics capabilities to a new level with a resolution of 1680 x 1050 definition XHD (extreme high-definition).

Alienware Aurora mALX has a 19-inch screen that supports two 'TOP' graphics processors, now nVidia GeForce Go 7900 GTX and the Alienware Aurora m7900 is not inferior to the GeForce Go 7900 GS.

' With nVidia graphics processor and SLI technology, Alienware has almost incorporated the desktop and mobile processing capabilities into our latest laptop systems ,' said Mark Vena. , Alienware's vice president of marketing said. ' Aurora m7900 and Aurora mALX provide customers with a mobile system with amazingly powerful options. No longer differentiate at home, office or on the road '.

NVidia's SLI technology is a 'sophisticated' hardware and software solution that can be activated to use two GeForce graphics processors in laptops that support SLI based on the nForce 4 SLI solution. This technology integrates smart communication ports in graphics processors and a high-speed digital interface on the graphics board allows for easier flow of data. A full suite of nVidia software provides premium load balancing, texture and compilation, delivering the best quality images.

Alienware Aurora m7900 17 'and Aurora mALX 19' have a website price of 1999 USD and 4499 USD with the default configuration. Users in Vietnam can order this item easily at GoGo.
