

The number of Windows 10 users suddenly increased, while Windows 11 market share continuously decreased

The April 2024 report provides an overview of Windows 11's market share compared to other Windows versions.

Statistics website Statcounter has just officially released its monthly report, revealing the latest details about the market share of Windows operating system versions running globally.

Previously in March 2024, Statcounter reported a strange decline in Windows 11's global user share. Notably, this trend continued last April. After reaching an all-time high of 28.16% in February 2024, Windows 11 market share has continuously plummeted below the 26% mark.

The April 2024 report provides an overview of Windows 11's market share compared to other versions of Windows, including now-discontinued and long-unsupported releases. According to Statcounter's latest figures, in February 2024, Windows 11 lost 0.97% market share, falling from 26.68% to 25.65%. It seems that Microsoft's efforts to encourage and even intervene strongly to direct users to upgrade to the latest operating system version have proven not really effective.

In contrast, as for Windows 10, this nine-year-old operating system has surpassed the 70% market share mark for the first time since September 2023, with an increase of 0.96% over the previous month, ensuring a strong position. certainly in the dominant operating system position in the Windows market.

It's strange to see Windows 11 losing a large amount of market share in the middle of its development cycle - a time when it should be seeing a surge in user numbers. Even Windows 8 and 8.1, versions of Windows considered by many to be 'failures', only began to lose market share and shut down after the release of their successors. Statcounter's statistics may not be 100% accurate in its estimates, but the continuous decline in market share for a new version of Windows, which Microsoft is focusing on investing in, is clearly unusual.

Despite Microsoft's efforts, the scenario where Windows 11 can catch up to Windows 10 in market share may not happen for a long time - or never - as rumors about Windows 12 have begun to appear. increasingly dense on the internet.

Some people argue that Windows 11 still offers little to no upgrade benefit, especially since Microsoft has removed some of the system's unique features, such as Windows Subsystem for Android. Add to this the increasing number of advertisements, some of which are quite brazen, and these will make it difficult for the operating system to win over and retain users.

Later this month, Microsoft will introduce new AI features to Windows 11, which could become the first solid reason why Windows 10 is left behind. However, rumors suggest that some of the most interesting features will

require quite high hardware configuration. So users who don't intend to upgrade their PCs simply have no reason to go for Windows 11.

In general, the cause of the slow growth in Windows 11 market share has not been clearly stated. However, the problem probably still lies mainly in compatible hardware requirements and general operating system stability. Another recent survey also showed that about half of workstations do not meet the hardware requirements of Windows 11, so cannot switch from Windows 10 to 11. Controversial feature changes, requirements High hardware and frequent errors continue to haunt Windows 11.

As for Windows 7, although in an unsupported state, this operating system still exists and develops. Statcounter says about 3% (-0.04%) of Windows users are still running Windows 7, which was completely discontinued in January 2023. Some developers still release updates for Windows 7, but Most mainstream applications and browsers have phased out this old operating system in recent times.

Below is the Windows market analysis table by the end of April 2024:

1. Windows 10: 70.03% (+0.96%)
2. Windows 11: 25.65% (-0.97%)
3. Windows 7: 3% (-0.04%)
4. Windows 8.1: 0.53% (+0.09%)
5. Windows 8: 0.36% (+0.08%)

Desktop Windows Version Market Share Worldwide
Apr 2023 - Apr 2024
