eBay has released an update to the PayPal application for Windows Phone 7.x and Windows Phone 8. Users can now download the app on Windows Phone 'stores'. As with previous versions, users will not be able to preview what is provided on this new version except download and feel for yourself.

In addition, the application has been '*missing*' from the beginning of the month and is now back on this latest update. Perhaps explaining the reason for this is to resolve errors that users encounter or improve to be more stable.

Users can download PayPal from Windows Phone Store completely free here.
