

The products are expected to appear at the Apple 16/10 event

The iPhone 6/6 Plus duo has delighted fans during the biggest event in September, but the next event is expected to take place October 16, and people still expect Apple to release 'super products'. new. Here are the most likely products released by Apple and also waiting for users at the event to take place in the next few days.

The iPhone 6/6 Plus duo has made fans excited during the biggest event in September, but the next event is scheduled to take place on October 16, and people still expect Apple to release the super. new products.

It's been way too long.

Here are the products most likely to be released by Apple and also waiting for users at the event to take place a few days:

New iPad Air

Many people believe that Apple will launch the new iPad Air at this event, but they do not expect the new MTB to have major changes. According to some sources, the new iPad Air's biggest addition is the *Touch ID* fingerprint sensor and this is the first time this part has been on Apple's MTB (*previously only available on iPhone 5s, 6 and 6 Plus.*).

Currently, iPad Air is mainly in white and black. But soon, maybe Apple also released a yellow version. At the same time, the machine also has an anti-reflective coating on the screen, which helps better visibility, especially where there is strong light like the outdoors.

Inside the new, high-capacity iPad Air Apple will upgrade the configuration as a faster VXL kit (*probably A8X as some recent rumors*), higher RAM, more storage capacity. The ability to run multitasking is also being targeted by Apple.

In addition, there are reports that there will be a 12.9-inch screen. However, this product is likely to be sold late, as early as next year.

New iPad mini

Not surprisingly, the next version of **iPad mini** will appear at the event. With this device, Apple may also do the same thing as the new iPad Air like Touch ID, more yellow, more beautifully redesigned, better outdoor visibility, upgraded configuration, .

But if you don't release the new iPad mini, people are also expecting Apple to sell the current iPad mini at a cheaper price. Last year, the company sold iPad mini 2 for \$ 399 and they are expecting after the event, their price is \$ 329 or lower.

iMac Retina screen

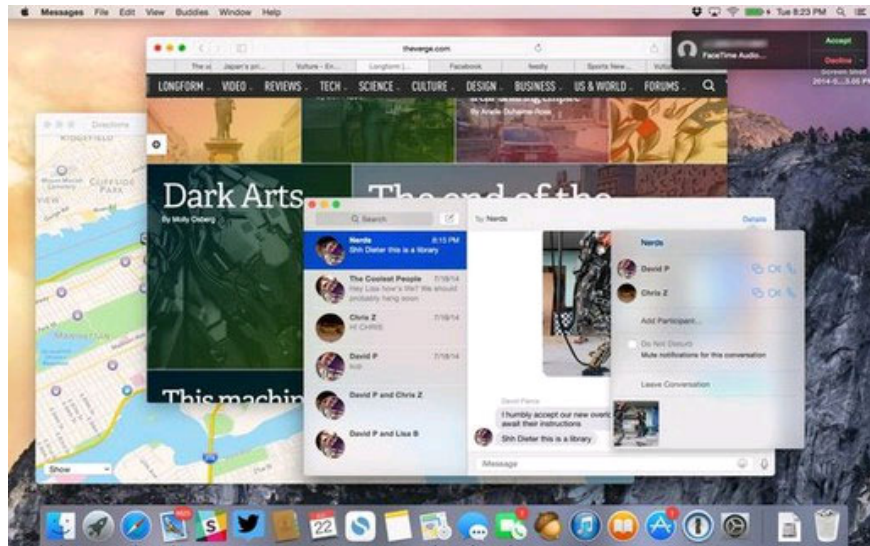

Recently, the *Re/code* page reported that the new iMac will have a higher resolution Retina display than today. If this comes true, the new iMac will be Apple's first desktop with a Retina display.

According to some other reports, Apple may only launch a single iMac model with a 27-inch screen size of up to 5K. Apple's current 27-inch iMac has a 2K resolution (*1440 x 2560 pixels*).

In addition, the new iMac will be redesigned by Apple, as well as to further upgrade the current configuration.

The official version of OS X 10.10 Yosemite

OS X Yosemite had a third Gold Master version before the official version was released. Therefore, the ability to launch this OS at October 16 is very high.

Yosemite is a completely undone operating system compared to previous versions and is quite similar to iOS. Besides, this new operating system is also adding a lot of new features such as syncing iPhone, iPad to Mac, allowing sending / receiving messages, viewing documents, .

New Macbook?

Maybe at the event, Apple will release both the new MacBook Air and MacBook Pro, but either (*or both*) doesn't have much worthwhile changes. Currently, users only expect the 12-inch version with Retina display of this device.

The Macbook Air has not changed its design for 4 years and is unlikely to change much as the device has been considered a ' *standard* ' of the current laptop. There are some sources saying that the device will be available later this year but may be later due to Intel's slow supply of the processor. According to the *Wall Street Journal*, the new *Macbook Air* will go into mass production in December 2014.

And the new iPod?

Since 2012, Apple seems to "*ignore*" the iPod product line. This is quite understandable because of its '*obsolete*'. Therefore, the possibility of launching a new iPod is not high.

Instead, it is possible that Apple will release more updates, while reducing the price of the device further. The company's iPod touch has been reduced to \$ 199 instead of \$ 299 when it was first released.
