

The prospect of experiencing Xbox One games on PC is not far away

Xbox is not selling as well as Microsoft expected, and the manufacturer is still holding really remarkable ideas to compensate for sales for its key console game.

Xbox is not selling as well as Microsoft expected, and the manufacturer is still holding really remarkable ideas to compensate for sales for its key console game.

Recently at the beginning of February 2019, Microsoft has been opening up about it planning to bring Xbox Live to Nintendo Switch, allowing users to access some Xbox games right on the Nintendo. Immediately this information has attracted a lot of attention from the gaming community.

And now, Microsoft continues to talk about bringing Xbox One games to Windows 10.

1. 9 monumental peaks in the village gamers are Guinness World Records Gamer's Edition 2019 enrollment

In fact, Microsoft mentioned that in Windows 10 build 18334 version, it is likely that they will integrate some new gaming support features and provide State of Decay zombie survival game for free. let users experience these features. However, Microsoft did not explain what those features were.

Usually, when you download games from Microsoft Store, this application redirects you to a download link for games from serverdl.microsoft.com - the location of Windows Store apps and games. However, when Thurrott proceeded to download State of Decay, it was taken from assets1.xboxlive.com - the Xbox game host.

Also, another noteworthy sign is the format of the downloaded files in .XVC format, which is used on the Xbox One console. This proves that the downloaded game will most likely be an Xbox game.

1. Official: Nintendo Switch can run Android

Besides, this also shows that Microsoft intends to further narrow the differences between Xbox and PC, to give users a more seamless experience with the company's ecosystem devices. .

The new feature can work in tandem with the Xbox Play Anywhere program - where users buy selected games, and can access the tool on both Xbox and PC environments.

In addition, Microsoft has released the Unified Windows Platform (UWP) application in 2018, allowing application and game development across all Microsoft platforms without re-encoding.

As expected, Windows 10 build 18334 version will be released in April, so don't forget to update to the new version for Windows if you really feel interested in this feature.
