

# The reason why should buy soundbar speakers for TV

This article from Quantum will help you get more information about soundbar speakers and why they should be used for television.

Soundbar speakers, also known as loudspeakers, help to reproduce, simulate diverse audio ranges for different purposes such as: Watching movies, listening to music . This article will help you. More information about this product line and why it should be used for television. Choosing a right soundbar for your TV is a little tricky task, for the guide you can visit [Soundbar Buying Guide](#).

## I. What is soundbar speaker?

A basic set of soundbar speakers (loudspeakers) usually includes a long speaker bar and a sub speaker (Subwoofer).

Inside the soundbar speaker will be integrated from 2 to 3 small speakers to emit the main sound of the content. Because there are no surround speakers like the 5.1, the soundbar speakers are often equipped with sound technology to create multi-dimensional virtual surround sound effects, giving you the feeling of sound coming from many directions, though Actual sound emits only 3 channels.

A few years ago, the soundbar speakers were very small and expensive, but now the concept has completely changed. Currently consumers have all the brand options from JBL, Bose, Bowers & Wilkins, MartinLogan to LG, Samsung, Sony in all prices from a few million to tens of million. With the variety of designs and designs, they help satisfy the different needs of decoration and combination with TV in all sizes.

## II. Why should a soundbar speaker be used for television?

Soundbar is a compact, simple but extremely loud speaker. With so many gadgets below, the soundbar speakers will give consumers a great sound experience in their own home.

### 1. Real sound, more vivid

Upgrading audio from TV is always a practical need for everyone, because the quality of TV speakers is increasingly uninterested because the size is slimmer and more beautiful according to user needs, which will make you have to equip my own sound system.

Talking about the sound system, you will immediately think of the traditional sound system with 6 speakers with each function separately (1 Center speaker, 2 Front speakers, 2 Surround speakers, 1 subwoofer) can bring to You have a perfect sound quality, but take up too much space.

However, the soundbar speaker system can completely meet the demand of saving space of users while ensuring sound quality as 5.1 speaker system.

With 6 separate functions placed in a compact speaker, it comes with a range of advanced and modern audio technologies built into the speaker, giving you the opportunity to enjoy great sound, like carrying a theater. Sing professionally home. The right soundbar speaker is the king of all kinds of speakers.

## **2. Minimalistic design, suitable for use with television**

TVs are increasingly designed to be as thin as possible, so a large array of loudspeakers installed next to them will be unsuitable, losing the sophistication and elegance of the house. The appearance of a compact soundbar speaker will be a reasonable choice to combine with television to create a classy, ?luxurious and perfect space.

It can be seen that 5.1 audio system is very effective for enjoying surround sound, but they are too big with 6 speakers of all sizes and need a fairly large space. But with the soundbar speakers, there is only one long speaker with a TV and a small subwoofer that allows you to put it right near the TV.

Therefore, most people who need entertainment on television will think that the soundbar is the most reasonable. You can even hang on a wall or put it on a shelf for television.

## **3. Using modern wireless technology**

Soundbar speakers use state-of-the-art wireless technology, with USB, HDMI and external memory ports to provide convenience and simplicity during use and connection to the TV.

Another plus point for the soundbar is wifi and bluetooth connection, allowing sharing music content via mobile devices, easily entertaining anytime, anywhere.

# **III. Top speaker soundbar worth buying today**

## **1. SoundMax speaker set SB-217 / 2.1 - Reference price: VND 1,790,000**

2.1 channel music speaker set is designed with sophistication and luxury when there is a combination of tradition and creativity to meet the needs of modern entertainment today.

Instead of 2 satellite speakers as before, Soundmax has now been assembled into a bar-type speaker with an extremely elegant 900mm length, compact with only 2.6kg. The subwoofer is no less important when the quality of the bass notes promises not to disappoint with any entertainment field.

Especially with smart features such as supporting wireless music playback via the new generation Bluetooth technology system that allows you to connect to smartphones simply. In addition, this Soundbar satellite speaker can also play music with USB port and Micro SD memory card, not yet including the SoundMax SB-217 speakers, also equipped with a remote control (Remote) to support many functions.
