

The reason why you should only download the app from Play Store and App Store

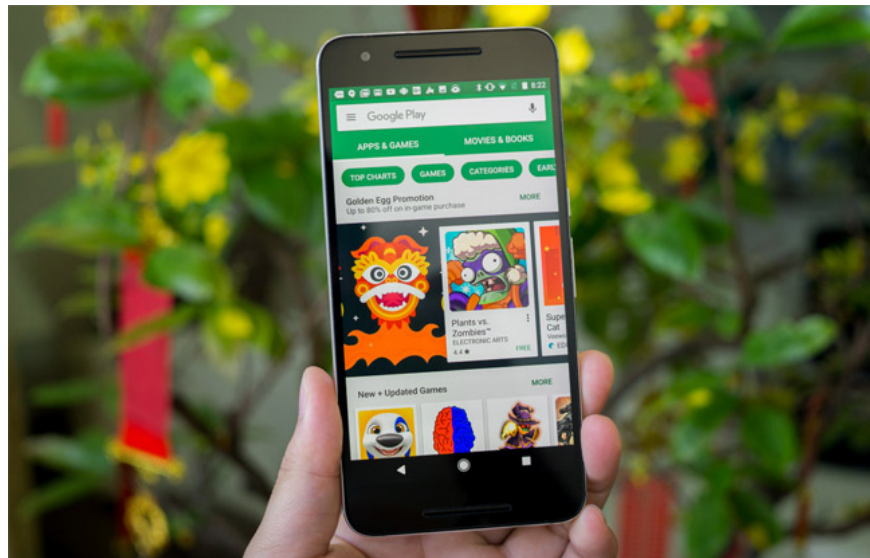

Do you have a habit of installing applications from a third-party app store? So stop this action immediately and switch to download the app from Play Store and App Store to make sure you get the latest updates and improve the privacy of your personal information. Here are 3 reasons you should not trust too many applications from third-party app stores.

Do you have a habit of installing applications from a third-party app store? So stop this action immediately and switch to download the app from Play Store and App Store to make sure you get the latest updates and improve the privacy of your personal information. Here are 3 reasons you should not trust too many applications from third-party app stores.

1. Free software download sites are safe
2. How to download applications on Google Play Store?

1. Easy to stick malicious code

Undoubtedly, third-party app stores are a fertile ground for malicious applications that spread many dangers to users. This type of malicious code is able to steal your personal information, install malware to dig virtual money to slow down your computer or display ads continuously very annoying. There have even been some malicious code exploiting the root level of Android and iOS systems, taking the highest position in the device and casually messing up your phone while you are unaware of anything.

Download the app from Play Store to avoid dangerous malicious code.

Although iOS users have a lower chance of being infected with malware than Android users, they should not be subjective. Because every software will have flaws, it is only publicly available and Apple knows whether to fix it or not. Even the non-governmental app store in Vietnam, there is no guarantee that everything posted on it is safe even if the app store is made by Vietnamese people. Currently, the third-party app store that many users trust is the Amazon Appstore, but this app is still missing or not updated, so the Play Store and App Store are still the perfect choice.

2. Not sure if you have used the latest update

As we know, if you do not use the latest version of the app, you may not be able to experience some attractive features and not be patched, whether it's a security error or an app's internal error. Normally, third-party app stores must wait for the official version to be uploaded to Play Store, the App Store will automatically retrieve the file, so there will be a delay, some applications will never be updated again. So it is quite annoying if you download it. Meanwhile, if it's just a free app, what is not installed from the App Store, the Play Store is easier to secure than many times.

App Store, Play Store are safe application stores.

3. You are not respecting copyright

What do you think when other people have put effort, money, sweat to get good software, so we download pirated app? This is no different than we are going to steal their intellectual property. The more serious when the number of software that is used for business makes money while the product creator is losing a lot of money.

Knowing that even if you use pirated, you will not be dealt with, no one is free to go to catch each person, moreover, there are not many sanctions in this case in Vietnam. However, everything comes from consciousness, try to buy the app you like to respect copyright and above all to support programmers who can continue to upgrade or make more useful new apps. for you to use later.
