

The record for the world's fastest charging smartphone is about to be broken by Oppo

Fast charging technology has taken leaps from 18 W to 45 W and soon, Oppo will make the fast charging record even further.

Fast charging is becoming an important feature and opening a new race in the smartphone market. Fast charging technology has taken leaps from 18W to 45W and soon, Oppo will make the fast charging record even further.

In a recent post on Weibo, Oppo Vice President Brian Shen confirmed that Oppo Reno Ace will launch in October and will be equipped with 65W fast charging, which can charge 40% battery in 10 minutes. As such, the fast charging power on the Oppo Reno Ace is 20W faster than the 45W fast charging on the high-end Galaxy Note10 + model.

The deciding factor for charging capacity lies in the battery on the device, the time it takes to fully charge is proportional to the size of the battery. That is, the larger the size of the battery, the longer it takes to fully charge.

Earlier, Android Authority conducted a test on Huawei P30 Pro, the device's 4,200mAh battery reached 75% capacity after 30 minutes and 100% after 56 minutes with 40W charging capacity.

In addition to fast charging speeds, manufacturers must also consider the battery life and temperature. According to calculations, the time to charge 100% 4,000mAh battery does not take 45 minutes with a 65W charging

capacity.

Previously, Oppo has joined hands with Lamborghini to launch Find X Automobili Lamborghini model with a maximum fast charging capacity of 50W in 2018, which can fully charge 3,400mAh battery in just 35 minutes, according to Oppo test results in each standard school.
