

The rumors that excite experts most about the iPhone 16 Series

Not the processor chip or the camera, this is the detail that makes the iPhone 16 series attract experts.

When it comes to the iPhone 16 series, reports suggest that many new features will be exclusive to iPhone Pro models this year. However, according to Bloomberg's report, iFan also has reason to expect the standard iPhone 16, especially if this iPhone has the Action button of the iPhone 15 Pro.

Illustration.

Action Button - Action is precisely a shortcut button that can trigger certain actions. Apple also offers some customizations in the iPhone's settings menu. These options include: muting the phone, opening the camera, turning on the flashlight, activating the magnifier, translating phrases, recording voice memos, etc.

Apple doesn't often add new buttons to the iPhone, so expanding the Action button to the iPhone 16 Series would be a big deal. They will make the iPhone experience more consistent and make multitasking and switching between apps easier.

Why should the Action button be on all iPhones?

The biggest reason why Action buttons should appear on iPhone 16 is simple: They're really useful. Users can program it to do almost anything in the iPhone's Shortcuts app, opening up a ton of possibilities.

In addition to its usefulness, this button offers a level of customization never before seen on an iPhone. All of the iPhone's buttons are made for a specific purpose: adjusting the volume, turning off or locking the iPhone, activating Siri, navigating back to the home screen, unlocking the phone, or making Apple Pay purchases.

But of course, Apple is leaving the Action button at the user's disposal. The role of the button really depends on what the user does most often on his phone.

Illustration.

Having that level of personalization is important because the iPhone lacks the multitasking capabilities found on Android devices. Aside from the Picture in Picture feature for using apps while watching a YouTube video or during a FaceTime call, there's no way to open multiple apps at the same time on the iPhone screen like an Android phone or iPad. It's also uncertain whether Apple will release a foldable iPhone with a larger internal screen to run multiple apps like the Samsung Galaxy Z Fold.

The arrival of the standard iPhone Action button, combined with the Dynamic Island area, could help users get things done more easily without having to tap, swipe, or switch between apps as often.

Bringing the Action button to the regular iPhone will also create a more consistent iPhone experience across Apple's product lines. One of the benefits that the iPhone offers over Android smartphones is that the software and hardware functionality are almost the same, whether the user is using an iPhone from 5 years ago or a year ago.

Of course, newer iPhone models will have longer battery life, more sophisticated cameras, higher quality screens, and improved designs compared to iPhones of years past. However, the software and how users use the iPhone largely remains the same from year to year (except in 2017 - when Apple removed the home button on the iPhone X). Making Action buttons standard across iPhone models will further standardize the iPhone experience.

The iPhone 16 "family" will not have many changes

According to the analyst, part of the reason why the Action button is the most important addition of the iPhone 16 generation is because this button will be a moderate upgrade compared to the iPhone 15 Series. The iPhone 16 series will have a new processor, the A18 chip.

Other notable rumors about the iPhone 16 quartet that have emerged so far mainly focus on the iPhone 16 Pro and iPhone 16 Pro Max. For example, Bloomberg reports, they will have a new button to record video. According to analyst Ming-Chi Kuo, the iPhone 16 Pro versions will also have larger screens, and the iPhone 16 Pro will have the quad-prism telephoto lens of the iPhone 15 Pro Max.

The bigger iPhone upgrade this year will be iOS 18. The update will introduce a host of new AI-powered features, possibly including an improved Siri virtual assistant that can control apps. of the user,.

In short, the iPhone 16 Series Action button will be the most exciting new hardware addition this year. From the telephoto camera to the titanium design, the always-on display, and the option of up to 1TB of internal storage, there are a lot of differences between the standard iPhone and the iPhone Pro. The Action button has proven its functionality and deserves a place on all future iPhones.
