

The Samsung Galaxy S10 'Lite' version may look like this

Galaxy S10 Lite will have a very similar appearance to the flagship S10 brother.

Not long ago, Sammobiles has shared information that the Korean manufacturer is likely to launch a cheap version of the Galaxy S10 flagship model called Galaxy S10 Lite.

In fact, this is not a rare product launch strategy, smartphone manufacturers like Xiaomi often launch low-cost versions with a shortened configuration of a certain flagship model (e.g. Mi 8 Lite). , or Sony with Compact line, targeted at customers who love the design of high-end version but financial situation is not too abundant.

However, the problem is that for manufacturers with abundant products covering all current segments such as Samsung, will the launch of a Lite version create overlap, 'step on each other'? ?

According to reliable sources, Galaxy S10 Lite possesses similar specifications to Galaxy A91 with Snapdragon 855 CPU, 8GB of RAM, 128GB of internal memory which can expand the storage capacity via microSD memory card. The battery capacity is about 4,500mAh with 45W fast charging technology.

Not only that, the latest patent that LIP has filed for Samsung and published by USPTO shows a more detailed look at the exterior design of this much-awaited phone model. In general, the frame of the Galaxy S10 Lite will be very similar to the 'senior' cap, in both size, edge, curve and the way the sensor is arranged.

Taking up almost the entire front of the device will be a 6.7-inch Infinity-O screen with FHD + resolution, and a 32MP selfie camera cluster in the upper right corner. At the back will be a 3-sensor camera cluster, with a 48MP main sensor, 12MP ultra wide-angle camera and 5MP depth-sensing camera, located vertically in the center instead of horizontally like on the Galaxy S10.

What do you think of the appearance of the Galaxy S10 Lite and the design of this phone? Leave your comments in the comments section!
