

The search engine and the race

In order to satisfy the increasing demand in search and competition with Google, a number of new search engines were born and are considered indispensable tools in the future.

In order to satisfy the increasing demand in search and competition with Google, a number of new search engines were born and are considered indispensable tools in the future.

Viewzi

The first search engine that is highly appreciated by analysts is **Viewzi**. Not only is the graphic interface quite eye-catching and unlike even Google, Viewzi represents search engines with future 3D applications.

In addition to functions as a normal search engine, when using the Viewzi the user will have a lot of options for displaying search results in 3D.

Inferior to Viewzi, but with SearchMe, users can view search information with 3D display mode.

However, unlike Viewzi, SearchMe does not have many choices in display mode, this may be a defect that makes SearchMe lose its 'top' position.

SearchMe

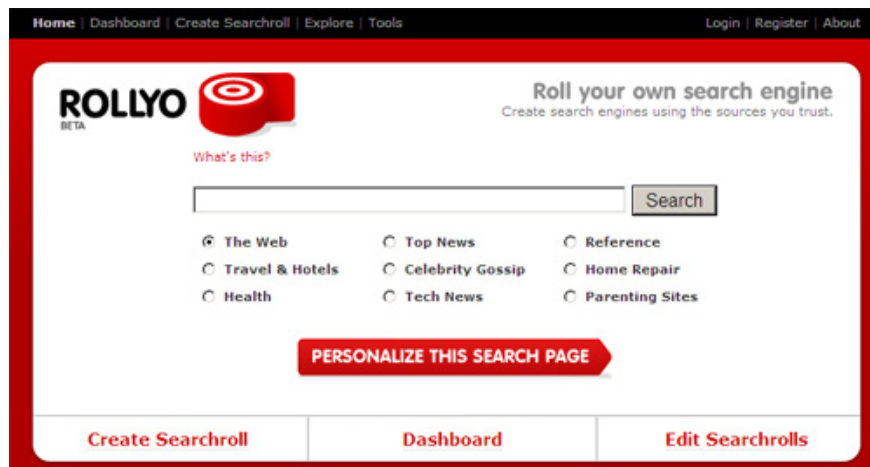

With **SearchMe** when typing search keywords, the results displayed will appear as Gallery, want to move to the next page or results with just one click. In addition, the next page display speed is quite fast and SearchMe also allows users to save search results for the next use.

The third place is Rollyo search engine. Ranked in the top search engines that will be widely used in the future, Rollyo has a way of displaying search results that is no different than Google and the interface is not as special as Viewzi and SearchMe.

Rollyo

However, it is no coincidence that **Rollyo** is ranked in the top, with Rollyo users can register for an account and create their own page on Rollyo to manage. Users can add 25 links to different websites to their site according to their individual needs and extract information with a high-precision filter.

In addition, searching better than Google with Rollyo allows users to search for keywords in the most specific areas
