

The secret of gold to choose to buy Mechanical Watches

Today, watches are one of the fashion accessories on the list that must be in everyone's closet next to clothes and shoes. Please join us to consult the golden secret to buy mechanical watches in the article below!

1. Instructions for screenshot of Android Wear smart watch
2. Discover the ideal time to do everything in the day by age
3. Take a look at the old Casio electronic clock that is "leveled" with many new and modern features!

After you have determined the purpose and budget you can pay for a watch, you have probably figured out the brand you need to buy, right? But that is just the " *soul* " of the watch, and the selection of detailed shapes to fit with your hands is still a problem. So which watch model really suits you?

Today, **watches** are one of the fashion accessories listed on the " *must-have* " list in everyone's closet next to clothes and shoes. The watches today are not only to see the time, it is also a jewelry for both factions, the most obvious symbol of the personality and value of the wearer. Not only does it show the fashion sense, luxury or sophistication of the owner, the watch also brings a sense of success and class to users.

Do you know that **mechanical watches** have many types, each with different prices and suitable for each wearer? If you are planning to buy yourself a mechanical watch, you must definitely read this article if you do not want to " *buy the wrong* " a mechanical watch that is not suitable for yourself!

What is Mechanical watch?

Mechanical watch is an automatic, non-battery-powered watch that runs on the power of a winding wire made by a flywheel or by a hand. You can think of the pendulum clock that we used to easily find in conditional families. That's the kind of clock that goes up on the wire by hand, running out of the clock, then the clock goes up again.

Later, watchmakers built flywheels for **wristwatches** , when flywheels (*an unbalanced semi-cylindrical part in a watch that automatically ropes, vibrating with the strap of the wearer to wind up through a system of gears and ratchets*) that movement by the hand moves, the clock will be raised to create energy for the watch to run. It is because it is not a manual winding, but through an automatic flywheel, it is called **an automatic meter** , referred to as a mechanical watch.

Currently, there are two types of mechanical watches: one is *handwinding* and the other is **automatic** (*Automatic*) - using the wrist wrist movement to maintain energy.

When buying mechanical watches, it seems that each of us has millions of different choices: from material, price, origin, color and style - almost endless choice. Please join us to consult the **golden secret to buy mechanical watches** in the article below!

There are three main factors to consider when choosing to buy mechanical watches: style, watch face and price. All three factors help you choose a watch that is satisfactory in any situation, choose to buy gifts for others or buy for yourself.

Designs

This is obviously the biggest question you need to ask yourself, what kind of watch do you really like? The first choice listed here is **a metal strap or leather strap watch** ? In addition, you should consider adding **a NATO Strap watch strap** , which can fit most types of watches and is available from third parties.

In the debate between metal strap watches or leather strap watches, there are many different choices in each category: Do you want a watch with gold, stainless steel or platinum? Want black or brown leather cord? Gold-plated or silver-plated metal wire?

Types of popular watch straps today:

1. Stainless steel wire or stainless steel (*Stainless Steel*): Durable, not oxidized or rusty.
2. Wire: made of ordinary steel, copper or polished. This type of wire will oxidize over time.
3. Titanium alloy wire: Light, durable and not oxidized.
4. *Leather Band* (*Leather Band*): There are many kinds of leather straps made from different types of leather (*eg, ostrich leather, crocodile, .*)
5. Plastic wire, cloth wire, rubber wire: widely used, from cheap watches to high-end watches.

About the clock case:

1. *Base metal* : made from ordinary steel, copper or Antimol, but after 1-3 years will peel. For identification, see if the bottom has *Stainless Steel Back* or *Base Metal* recorded.
2. Stainless steel or stainless steel casing: the most popular material with current watches, the advantages of this type are durable, low production costs. Identify by the words *Stainless Steel* or *All Steel* .
3. Other types of shells: Carbon, ceramic, aluminum or even titanium shells, only appear on super high-end watches that add value to the watch.

The choice now seems to be more difficult, but most of us have a priority for us. Traditional leather watches are popular in official events, but high-end metal watches are equally luxurious.

Clock face (Dial)

Photo source: Micah Singleton / The Verge

After finding the type of watch you want, **select the watch that** suits you. The watch face also has thousands of different options: **date and time** , *sub-dials* (small *sub-dials used for the purpose of measuring the hours or minutes that have passed on the clock or display*). **day time**), **time zone** , **chronographs function** (*time-measuring timer*), **tourbillion motion kit** (*a special design to minimize the impact of gravity on some parts of the watch, to increase accuracy of the watch and make up the aesthetics of the watch*), **the Moon phase feature** (**Moon** calendar - *the function to monitor and display the lunar phases of the lunar calendar. Some watches also have similar functionality but monitor the sun (in a 24-hour cycle)*); .

Perhaps the above factors are no longer important, when you have a specific reason to buy a watch, such as: buying a watch with chronograph function suitable for divers. For most people, the real choice here is in terms of design. Do you want to have a watch that fully displays the numbers in a clear or minimal way? A chronographs watch usually has 3 side plates, while a multi-function watch shows relatively little on the watch face. **These multi-function watches** are designed with 1 to 3 functions: the clock has the function of measuring extra time, the clock has a chime (*minute reminders*) and the clock displays the astronomical calendar. When a watch incorporates all three functions, it is called " *Grand complication* " .

If this is your first watch, choose a minimalist watch with a beautiful design that can be carried anywhere. If you already have a watch like this or if you want a more advanced watch, choose a multi-function watch like a chronograph, which might be the right choice for you.

Price

Prices do not determine the features available in the watch but it determines the material quality, structure and time of the watch you choose.

Sure you can buy an **Invicta watch** (*American fashion brand*) on Amazon for about \$ 100, which looks pretty much like **Rolex watches** or **Hublot watches** . But if you buy it, you can see that this watch is gold plated instead of real gold, this type of watch is mass produced instead of carefully selected from within like the Rolex brand and probably It must never have been done by hand.

In addition, **the origin** is also something you need to consider. Some people want to buy watches originating in Switzerland, while others prefer to buy watches in the US or even Japan. The most expensive watch is definitely a product of Swiss origin, with some of the exceptions like **Swatch watches** very popular and affordable. Watches originating from Japan and the United States can be found for only US \$ 300.

Find trusted places to buy

Photo source: Micah Singelton / The Verge

As soon as you determine what kind of watch you want to buy, just take the final step **to find the genuine place to buy** . You should go directly to the watch manufacturer (*if possible*), or **check the information on the website** - the official authorized place from the manufacturer near where you live.

There are also used watches on the market, if you're looking for a watch that looks like a Rolex vintage watch at an affordable price. (*A used Rolex watch has prices ranging from \$ 4,000 to more than \$ 100,000 depending on the type.*) Whatever type of search you are looking for, you should only buy a used watch from the seller. Prestigious and authenticated. In the classic watch market, counterfeit goods are now very popular, so it is important for new watchmakers to make sure that the seller is not a " *deceiver* ."

A watch is something that can be passed down through generations, even if it is worth buying the right goods and taking care of it properly. So, choose wisely and know that it can be a good investment opportunity to become the latest heirloom in the family.

Above is the most basic knowledge for those who want to learn about mechanical watches or simply want to find a wristwatch.
