

The secret of the larger pyramid works in Egypt

Pyramids are ancient buildings built in many different civilizations. Although it has been discovered and studied for a long time, we still have not seen all the pyramids built by ancient people in the world. Here are three places with pyramids larger than the famous Egyptian pyramid that few people know.

Pyramids are ancient buildings built in many different civilizations. Although it has been discovered and studied for a long time, we still have not seen all the pyramids built by ancient people in the world. Here are three places with pyramids larger than the famous **Egyptian pyramid** that few people know.

Sun Pyramid in Teotihuacan.

Largest pyramid in Mexico

Not long ago, researchers at the Institute of Archeology and National History of Mexico (INAH) discovered a giant pyramid about 2000 years old of **the Mayan civilization** in Tonina, Chiapas. This pyramid is bigger than the Sun pyramid in Teotihuacan.

The height of this pyramid reaches 75m, higher than the Sun pyramid at Teotihuacan 65m. Construction structures are connected by paths leading to the tower.

Tonina Pyramid.

Researchers have identified the city center architecture from 10 to 12 hectares wide, which means that it is twice as wide as the south side of the defensive wall - one of the Mayan architecture.

The Caral pyramid

5,000 years ago, **ancient Peruvians** living in Caral created an ancient civilization with the most developed agriculture and architecture in South America.

They built historic buildings and pyramids that deserve to be proud of the six great pyramids surrounding a large square with garden public buildings, an outdoor theater and three squares. sunken in the middle .

The Caral pyramid.

Archaeologists were surprised to discover that the Caral pyramids were built using advanced techniques in the year 3,200 BC, equal to the age of the Egyptian pyramids.

Researchers today are still unable to explain the mysteries behind South America's greatest independent civilizations.

Pyramid in China

The Chinese pyramid is said to be the most **mysterious ancient architectural** works on the planet, built less than 8,000 years ago.

According to the pilots who flew through the Great Pyramid in China, this building is about 300m high, an area of 52,500m², while the Great Giza Pyramid in Egypt is only 147m high, 320m wide and an area of 202,000m².

Therefore, they are considered the largest and most ancient constructions ever discovered. However, some researchers believe that pyramids in Bosnia are older and larger in China.
