

# The secret to teaching young children about the Internet

Parents should equip our children with the necessary tools and knowledge, and make them feel responsible for what they do online and conduct themselves to a variety of digital threats.

**Parents should equip our children with the necessary tools and knowledge, and make them feel responsible for what they do online and conduct themselves to a variety of digital threats.**

>>> **Monitor your child's online activity in Windows**

Children today are more and more aware of technology faster than their age. They can surf the web, download content and create personal profiles on social networks. It's hard for parents to follow the kids all day, control and guide them all the online experiences they have.

However, what we can do is equip them with the necessary tools and knowledge, and make them feel responsible for what they do online and conduct themselves in front of many threats. Different numbers.

According to Effendy Ibrahim, Director of Consumer Business & Internet Safety Law Advisor, Symantec Asia, one of the most important things a child should know is their understanding of the web only. is a small part of the online world.

Just like how you teach them to be respectful, honest and cautious, attentive in the real world, it is equally important that these values ??also need to be brought into their online lives. Children need to differentiate between the use and abuse of the Internet, and must memorize the important general principle that the rules in real life are the same as in the online world.

## **Curious, not imitating**

When your kids start going online to do their homework or build their own world with music, movies and games, it's important to let them know, like stealing things that belong to others, copying other people's content and word information are also wrong.

Show them the legal ways to download music, movies and games. If they use the Internet as a search engine for assignments, teach them the right way to articulate resources as well as teach them to avoid plagiarism.

When we teach young children how to legally buy digital content, we should also let them know this limit when using our debit or credit card.

## **The danger from strangers**

While applying social networks or social games to teach children to communicate and integrate with the world around them, it is important to let them know that communicating with strangers can cause bad consequences in real life. . Behind the computers, many cyber criminals use fake identities to deceive innocent, vigilant victims.

Instead of preventing contrer from communicating with anyone online, teach them how to respond safely to everyone they meet on the web. Let them know not to give personal details such as phone numbers, home addresses or email to strangers, and never open unsolicited emails because they may contain malicious viruses and malware.

However, such precautions are not necessarily good solutions to all threats. Your child's computer needs to have an up-to-date security software installed, such as Norton Internet Security or Norton 360, to help protect against viruses, spyware, or mail attacks. trash from the internet.

## **Pay attention to the word network**

When using email or IM messages, make sure your children are aware of the language they use. Today, there are so many acronyms that are used in fact they are quite vulgar, so it is important for young children to respect the people they talk to online, and avoid saying anything. they are not allowed to speak in real life.

## **Think carefully before clicking**

Viruses and malware are permanent dangers online. When our children enter the online world, it is certain that they will encounter lots of flashing advertisements and links to free games or eye-catching wallpapers. Clicking on them will often result in malicious software being downloaded and installed on your child's computer, which is likely to cause loss or misappropriation of personal data.

Tools like Norton Safe Web Lite will help scan URL links and report potential risks if you visit the site at the same time and display useful reviews of other users about the overall safety level. Generate the page. This allows online users to make informed decisions about the sites they plan to visit.

## All from within the family

When your children start to discover more about the online world on their own, it is important that we, as parents, actively monitor their online behaviors, from there. can solve any problems they can cause in this process. Norton online Family software will help you do this by providing information about your child's online habits, such as which website they are going to, who they meet and how long they will go online.

Such information will help and encourage conversations or feelings between you and your child, helping them develop the skills and habits necessary to become intelligent and knowledgeable children about the Internet. This tool now fully supports Android, iPhone®, iPod touch® and iPad™ devices. No need to open a web browser, parents can still control their children's online activities, change settings and turn on, turn off the required features at any time, from any where.
