## How to connect a Bluetooth headset to the phone

Here's how to connect a Bluetooth headset for each operating system. You can refer to and apply the same method to your device:

### Connect the Bluetooth headset to your Android phone

#### *Quick start Guide*

Start the Bluetooth headset > Open Bluetooth on your personal phone > Search until the name of the headset device you are using appears, then click connect > Enter the security code (if any) > Choose any song to check whether the headset is working or not.

#### *Detailed instructions*

The steps to connect a Bluetooth headset to an Android phone are extremely simple as follows:

1. **Step 1:** Start the Bluetooth headset by pressing and holding the power button for about 2-3 seconds. Most Bluetooth headsets on the market are started using this method.

2. **Step 2** : Turn on the Bluetooth feature on your phone according to the shortcut. You can also visit Settings to set up.
3. **Step 3**: The phone will automatically detect nearby Bluetooth-enabled devices, click on the name of the headset brand you are using to connect. If your phone cannot find the name of your headset, check to see if the headset is out of battery or not turned on. Then you proceed to search again to connect.

1. **Step 3:** A list of connectable devices will appear. You choose the name of your headset and click the **Connect** button . You wait a while to complete the pairing process between the two devices.

## **4 ways to choose a Bluetooth headset that suits your needs**

On the market today there are many different types of Bluetooth headsets, but the most popular are the 4 types below. Depending on your needs, choose the appropriate device, specifically:

1. **Clothespin-style headphones :** This is a type of headphone that can be fixed and clipped to the shirt to avoid falling, so users can use it with peace of mind while traveling. However, this type of headset still has a wire, so it can cause discomfort and entanglement for some users who love wireless connection.

2. **Ear-mounted headphones:** This is the most popular and popular type of headphone because of its stability and rarely errors during use. However, the downside is that the sound quality is not standard, so it is not too suitable for users who love high-quality sound experiences.
3. **Headphones:** This type of headset has the best sound quality among Bluetooth headsets. Thanks to that, you will have the best learning and entertainment experiences and not be affected by any noise. However, this type of headset has a quite high price, so it is often suitable for people with abundant economic resources.
4. **Neckband headphones:** This is the most optimal type of headphone for users who like to do sports while also connecting headphones to listen to music. With a unique design, the headset holds tightly to the head so users can move freely without worrying about falling or getting entangled.

## Epilogue
