

The story of the world's most popular computer game

For the past 20 years, there is a game that attracts more office workers than any other game, although its content is not violent or sexually explicit. It is a Windows Solitaire card game.

For the past 20 years, there is a game that attracts more office workers than any other game, although its content is not violent or sexually explicit. It is a Windows Solitaire card game.

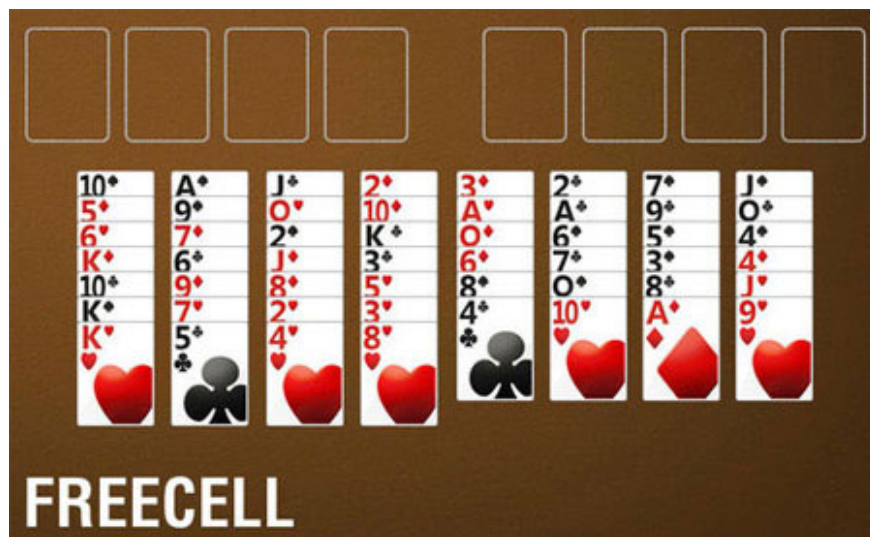

With the proliferation of shooters, farm games, online role-playing games, games that have appeared for decades will be easily forgotten. However, the number of Solitaire users is still up to hundreds of millions.

Famous game Windows Solitaire.

According to Gizmodo technology blog, thanks to the built-in computer, some games like mine detection Minesweeper, Tetris puzzle . are not difficult to entice a few tens of millions of people, but only Solitaire is favored by Microsoft " *The world's most-used Windows application* " in 2004. With a large number of users of Word, Excel, Outlook Express and Internet Explorer every day, this is actually Solitaire's admirable title.

Many experts say that, before the farm game on Facebook rises, Microsoft's game is the biggest threat to productivity at workplaces. But another study by the University of Utrecht (Netherlands) in 2003 found that those who were allowed to play Solitaire during the hours were more efficient and more interested in work than those banned. This game is like a cup of coffee at recess to help employees relax.

Some versions of Solitaire like Spider Solitaire or FreeCell.

Microsoft has a reason to put Solitaire into Windows: making people comfortable using computers and operating systems. This cause is no longer important, but back in 1990, Windows was a relatively new concept for many people, moving the mouse was quite difficult and personal computers were still strange to those who were chiefs. finished in the environment of pencils and typewriters. Solitaire's simplicity and familiarity make it easy for users to use the mouse to point and click.

Although the most famous game in the world, few people know the names of those who made it. They are almost not rewarded or honored because they are Microsoft employees and code, design . are considered their daily work.

Klondike designed by Susan Kare.

The first version of Solitaire was introduced in Windows 1990 as Klondike, designed by Susan Kare and the person who wrote the game code is Wes Cherry. As soon as he was developing, Cherry predicted the possibility that the game would be much loved by office staff, so he inserted the "boss key" code in the game so that when the button was pressed, the deck would disappear and the display would be few. code .C (pretending to be working). However, Microsoft asked him to remove this feature in the version that was included in Windows 3.0.

Windows Solitaire is regularly updated with new graphics and game rules according to the operating system. For example, the version on Windows 7 and Vista allows the player to save (save) a game that is playing badly.
