

The strange object is from ancient Roman times, the mystery cannot be decoded

The blocks of twelve-sided, hollow objects that appeared from 200 AD were discovered by archaeologists in the present-day France and southwestern Germany but without any notes about the mass This strange body.

The inner, hollow, twelve-sided objects appeared from the year 200 AD, discovered long ago by archaeologists in present-day France and southwestern Germany but without any notes. about them. Therefore, until now, no one has known the use and function of this strange object.

Most of these strange objects are made from copper except in rare cases made of stone. At each corner of the cube, there are small circles that make them look like a strange spherical ball. In addition, on the sides of this cube there is a large round hole in the middle which is connected to an empty center.

It has been found that more than 100 strange bodies of different sizes ranging from 4 - 11cm are scattered throughout the European regions of the ancient Roman empire.

For years, researchers have proposed many theories about the use of this object, from candle holders, plugs, a fortune-telling device, a metal head of a decorative stick, a head mace to a toy, a dice, or a tool to measure the distance on the battlefield.

Because these strange objects are mostly found in the area of the Gallo - Roman culture, many people believe that this strange object is related to the religion of ancient Romans. This hypothesis is accepted by many people.

But all is just a hypothesis, scientists have not yet found any material that mentions their existence or function. Therefore, this is still a puzzle without solution.

1. Discover the secrets of the 2,100-year-old "ancient astronomical computer"

2. The two mysterious rooms in the Great Pyramid of Giza cause scientists a headache
3. Looking for the reason why the ancient Egyptians stopped building pyramids?
