

The ThinkPad T430 uses a battery pack that lasts up to 32.5 hours

Manufacturer Lenovo has implemented a rather unique customization on this product, which allows theoretical users to experience 4 working days on a computer without plugging in a charger.

Manufacturer Lenovo has implemented a rather unique customization on this product, which allows theoretical users to experience 4 working days on a computer without plugging in a charger.

Inheriting the ultra-durable magnesium alloy frame and ultra-light carbon fiber casing of the ThinkPad line, the T430 version adds new technologies to reduce volume, improve mobility and enhance component protection. .

The ThinkPad T430 has 4 USB ports with 2 ports 3.0 located on the left edge, 1 port 2.0 on the right edge and 1 2.0 port on the rear edge, next to the power button. A special feature is the USB 2.0 port on the rear edge which is "Always On" - so users can charge the handset when needed without turning on the device. Next to the USB 3.0 port is the mini-Display Port, which connects future video audio with great bandwidth advantages.

The T430 is a business service machine and communicates at a high level of performance. The device integrates the most advanced Intel microprocessor currently 4-core Core i7-3520M clocked at 2.9 GHz. Along with 4 GB of internal memory, 420 GB hard drive and Intel HD 4000 graphics card built on Ivy Bridge technology (with custom NVIDIA NVS 5400M 1GB or 2GB Optimus Technology discrete card).

Lenovo has included some applications to optimize performance. For example, Rapidboot and Lenovo Enhanced Experience 3 technologies for Windows 7 help T430 launch Windows 7 Professional 40% faster than other PCs with the same configuration.

Another app that was first demonstrated as Lenovo Apps (instead of ThinkVantage) was also appreciated. Lenovo Apps has built-in social networking applications, popular news and audio and video management features of the device to minimize manipulation, reduce the gap between information and users. A noteworthy new technology on the T430 is Intel Smart Connect that helps the device switch from Standby (rest) status to Online (working) in an instant.

The T430 Web Conference solution is also enhanced with audio optimization using Dolby Advanced Audio v2 technology and 720p HD webcam with face-tracking features. On the phone, the stereo speakers are placed on both sides of the keyboard, making the harmony very lively and honest. Users can both enjoy a high-quality, email-enabled and text-based symphony on Lenovo's own unique AccuType keyboard.

Users can choose to customize the keyboard backlight function for use in dark lighting conditions. The new layout is a bit strange but the sensitivity and smoothness of the T430 keyboard still belongs to the top laptop keyboards available on the market.

T430 as well as other ThinkPad products are always equipped with the best in security technology in the segment, including fingerprint security, data encryption of the entire hard drive, USB connection management, encryption Hardware connection and BIOS security.

The ThinkPad T430 has appeared in Vietnam market with a starting price of 21 million and varies depending on the configuration, along with a flexible warranty for 3 years.
