

The ThinkPad X1 Carbon Ultrabook has a touch panel

The sample Ultrabook named ThinkPad X1 Carbon Touch has been 'leaked' information right on Lenovo's official website.

The sample of Ultrabook called ThinkPad X1 Carbon Touch has been "leaked" information right on Lenovo's official website.

The image of ThinkPad X1 Carbon Touch has just been revealed on Lenovo's website.

The Chinese manufacturer also revealed both the image and the launch of the product in December. However, soon after, the ThinkPad X1 Carbon Touch information was immediately removed from its website.

Information revealed that the ThinkPad X1 Carbon Touch is equipped with a 14-inch HD + resolution screen (predictably 1,600 x 900 pixels) and supports multi-touch with 10 fingers. This model also supports maximum gesture commands with touchpad to optimize performance with Windows 8. In addition, Lenovo also advertised the ThinkPad X1 Carbon Touch with a *"thin and light"* design, and also owns *"the carbon fiber structure"* resembles the *"elder"* ThinkPad X1 Carbon.

Information about other hardware of the product has not been disclosed. However, Slashgear predicts that the device will have similarities to the ThinkPad X1 Carbon.

The ThinkPad X1 Carbon was introduced in August this year. Heavy machine is only 1.36 kg and thin 1.7 cm. The product uses an Intel Core i7 processor, Intel HD Graphics 4000 integrated graphics chip, a maximum of 8

GB DDR3 RAM, supports Dolby Home Theater v4 audio technology and allows the choice of SSD capacity of 128 or 256 GB.
