

The web browser will replace the operating system

The GOS 'cloud' operating system fully integrates utilities that work on the web environment, showing that the browser is gradually taking over the role of desktop software.

Operating system "cloud" gOS fully integrated utilities operating on the web environment has been introduced in the exhibition Netbook Expo in Paris (France) shows that the browser is gradually taking on the role of desktop software .

The interface resembles Apple's operating system.

gOS 3.0 of Good OS (Taiwan) started in just a few seconds and the set of web services presented is similar to the Mac OS X interface. This version currently contains Google applications (Google Gadget). including Google Mail, Calendar, Reader, News, Applications, Picasa . and more than 50 other gadgets.

Add gadgets (small applications that work on the web) for gOS 3.0.

gOS 3.0 has not actually replaced the operating system that is designed to work in tandem with Linux and Windows XP on low-profile devices like netbooks (mini laptops) and nettop (mini PCs). It provides an almost complete integration of the services most frequently used by people at a fast speed like on a desktop platform without consuming a lot of computer memory.

gOS 3.0 is now free to download and users can install it on the computer or burn it to CD directly.

Microsoft is also about to launch Windows Azure - the browser operating system, allowing developers and technology enthusiasts to build applications and websites directly on the virtual server system updated, maintained and maintained by Microsoft. protect.
