

The world's first 5G network package, priced at 57 USD / month, with no capacity limit

Recently, Elisha - a Finnish operator, announced the world's first commercial 5G package. Accordingly, the price of 5G package is high speed (can reach 600Mbps), unlimited capacity of this network is 57 USD (1.3 million VND) a month.

Recently, Elisha - a Finnish operator, announced the world's first commercial 5G package. Accordingly, the price of 5G package is high speed (can reach 600Mbps), unlimited capacity of this network is 57 USD (1.3 million VND) a month. A high number for many people.

From the package of Elisham, other carriers can rely on it to give themselves the right packages to entice users to switch from 4G to 5G network.

In June 2018, Elisha said it would be the world's first commercial network operator 5G but unfortunately this plan was not successful. This created an opportunity for SK Telecom, KT and LG Uplus, three Korean operators to become the first units to commercialize the 5G network in the world.

Currently, three major Chinese carriers China Mobile, China Unicom and China Telecom are also trying to test 5G networks in some big cities like Beijing, Shanghai, Chongqing, and Guangzhou, etc.

In theory, the 5G network has a very high download speed, can reach 2.8Gps, only takes a few minutes to download a movie of tens of gigabytes. But in reality, depending on the ambient environment, the speed may decrease.
