

The world's smallest 4K video camera, with slow-motion

This camera is capable of recording slow-motion video at up to 200 frames per second in Full HD resolution.

Insta360 has just introduced the world's smallest 4K video camera, called Insta360 Go 3S. With improved 4K quality and a weight of 39g, the Insta360 Go 3S camera inherits the size of the old version but integrates many important upgrades. Especially the location feature via Apple Find My, increasing the shooting time up to 140 minutes, and smart gesture control.

Insta360 Go 3S is the most compact 4K camera available today.

The product is waterproof to a depth of 10m according to IPX4 standards. However, the manufacturer recommends not to immerse it in water or use it for high-speed water-related activities such as surfing and water skiing.

On the outside, the Action Pod case is unchanged from the Go 3, acting as a multi-purpose carrying case for remote control and charging the Go 3S. Whether shooting with the camera inside the Action Pod or attached separately, users can preview footage on the 2.2-inch flip-out touchscreen.

Equipped with a 50% more powerful processor and a new wide-angle lens, the Go 3S offers double the resolution of the previous version's 2.7K camera. It has a new MegaView FOV mode, which delivers more realistic images with less distortion and straighter edges. It also supports Dolby Vision with a wider dynamic range and improved detail thanks to new HDR technology.

The Insta360 Go 3S is capable of shooting 4K video (30 frames per second). In addition, this camera will make special moments smoother with speeds up to 200 frames per second in Full HD resolution (1080p), or 100 frames per second in 2.7K resolution.

Insta360's FlowState stabilization and horizon lock will also help keep your videos steady. After shooting, you can edit them using the free Insta360 editing app for mobile and Studio for PC. The combined AI will help your footage sync to the beat of the music.

The Insta360 Go 3S can connect to smartphones, compatible with iPhone Xs or later, Android 10.0 or later, and HarmonyOS 2.0 or later. The product has two storage options: 64GB (priced at VND 10.89 million) and 128GB (priced at VND 11.59 million), with two color options: white and black.
