

The worst 100 Password ranking in 2018

From more than 5 million Password issued by hackers during the year, SplashData site has filtered and released the worst Password ranking in 2017.

Below is a list of the top 100 worst passwords for 2018 published by SplashData based on the data they compiled from more than 5 million passwords leaked in the past year.

As in previous years, passwords located at the top positions in the list are still '123456' and 'password'.

SlashData also recommends that users should comply with the safe password setting to prevent possible risks:

1. Password includes 12 characters or more.
2. Combining many types of characters: uppercase letters, lowercase letters, numbers and special characters.
3. Do not share passwords for different services.

Check out the list of the 100 worst passwords for 2018.
