

# The Yahoo Mail application for Windows 8 has the first update

In December, Yahoo officially introduced Windows 8 / RT users the first version of Yahoo Mail designed in Modern UI style.

**In December, Yahoo officially introduced Windows 8 / RT users the first version of Yahoo Mail designed in Modern UI style.**

The launch of **Yahoo Mail** for Windows 8 / RT application aims to refresh this once-famous email service, with more than 298 million people still regularly using the service. Last weekend, Yahoo has just released a new update for this application.

The new version for the Yahoo Mail application has a version number of 1.2, which adds many essential components, helps users to actively manage the process of managing and using Yahoo Mail mailboxes. Now that you can add, edit, rename or delete a folder in your Yahoo Mail account, these actions were not initially supported when Yahoo introduced Yahoo Mail for Windows 8 / RT. In addition, the mail search feature is also supported in this new version.

New versions of **Windows 8** applications can also search and access information from their Yahoo! Mail address book. Yahoo Mail 1.2 also adds support for languages like French, Spanish, Italian, Romanian, Chinese, Greek, Chinese, English, Indonesian, Swedish and Vietnamese.

This new version also fixes some application performance errors, you will see the Yahoo Mail application running quickly and smoothly after the upgrade.
