

There are 50 venomous snakes, this is the most unique snake on the planet

The venom of this frightening monster can kill 100 people at once.

This scary "monster" can kill 100 people at once.

The domestic Taipan snake or Fierce snake, the serpent has the scientific name *Oxyuranus microlepidotus* of the snake snake family originating from Australia has been dubbed the terrestrial snake living on the planet's most toxic venom.

Inland Taipan snake lives from central Australia to the western state of Queensland and southeastern Northern Territory.

The venom of the domestic Taipan snake is neurotoxic, 10 times more toxic than Mojave rattlesnake and 50 times the cobra.

A bite of this snake contains 110 mg of venom that can kill 100 adults or 200,000 mice at the same time.

Victims of this poisonous snake will suffer terrible pain before they die.

After a few seconds of being bitten, the venom numbs the nervous system, attacking the bloodstream directly, causing blood to clot and clog. Victims will die of heart failure, respiratory failure after 45 minutes.

This venomous snake is 1.8m to 2.5m long, and can move quite quickly.

Besides, they also possess the "transcendent transformation ability", their body color can be changed from dark black, light brown or dark green depending on the environment.

Fortunately, people rarely catch terrestrial snakes with the most terrifying venom in the world in nature because they are very shy, often hiding when in trouble.

Domestic Taipan snake prey on.
