

There has been hack Among Us and this is how you find out hacker

Among Us is a pretty attractive game, so it also becomes a hacker target.

Famous games often become the target of hackers. These guys often write software to cheat, ruin the gaming experience of other gamers.

Soon after becoming famous, Among Us also became a victim of hackers. In this article, we will learn about the types of hacks in Among Us and how to detect hackers, those who ruin other people's experience.

What are the types of hack Among Us?

Up to the present time, there are two methods to hack Among Us and they both devastate the fun of this game.

The first is not necessarily hacking, but more of it. To do this, a group of friends will join the public playroom together. By using third-party communication channels, they disclose information to each other in order to quickly discover Impostor.

The second way is actually hacking because it involves software that interferes with the game. These softwares bring benefits to room owners or the players who use it. There are many types of software that interfere with Among Us. If you have the software, you should always designate the host as Impostor. Meanwhile, other software reduces the waiting time for killing skills so Imposter can easily win.

Hundreds of other mod software are being shared widely. They can speed up, mass kill, quickly destroy, and even limit voting time .

How to detect hacker in Among Us

Usually we only recognize a hacker in Among Us thanks to that person winning too quickly.

Is there a fix?

Among Us's developer, InnerSloth, said he and a small group of employees are trying to figure out how to fix the problem. Among Us development company needs time to design a mechanism to detect, report as well as punish players who use cheating software.
