

There was an iOS 13 and iPadOS Public Beta update, download and install

Today, Apple has released the first iOS 13 and iPadOS Public Beta updates, any user can join the test.

Today, Apple has released the first iOS 13 and iPadOS Public Beta updates, any user can join the test. So, now you can easily download and install iOS 13 on your iPhone or iPad in one note without any tricks.

According to previous information, Apple said it would release an update of iOS 13 and iPadOS Public Beta in July, although it brought this version to users a few days earlier.

To be able to download and install iOS 13 Public Beta, please register the test program with your Apple ID account at the link below.

<https://beta.apple.com/sp/betaprogram/>

Then, you go through the iOS tab -> then select Enroll your iOS device. On the iPhone, you scroll down to the Install Profile section and download the profile of iOS 13 Public Beta to the device.

After the download process is complete, simply go to Settings -> click on the download profile item to start the installation process.

With iPadOS, you do the same.

Note:

1. iOS 13 only supports iPhone 6s / 6s Plus and above.
2. iPadOS only supports iPad Pro, iPad (Gen 5), iPad (Gen 6), iPad mini 2019, iPad Air 2019, iPad mini 4 and iPad Air 2.

3. You should backup your device with iTunes before installing the iOS 13 Public Beta version.
