

There were Windows 10 build 18312 with many improvements for the operating system, invited to download ISO files and experience

Windows 10 Insider Preview build 18312 (19H1) has just been released by Microsoft for Insider Fast users with many important improvements to the operating system.

Windows 10 Insider Preview build 18312 (19H1) has just been released by Microsoft for Insider Fast users with many important improvements to the operating system.

Here are the noticeable changes in Windows 10 update Insider Preview build 18312 (19H1).

1. Add 7GB of reserved space for Windows 10 updates

In version 19H1, Microsoft decided to set aside a small amount of memory (starting at 7GB and can change over time) just to update updates, applications, temporary files and system cache.

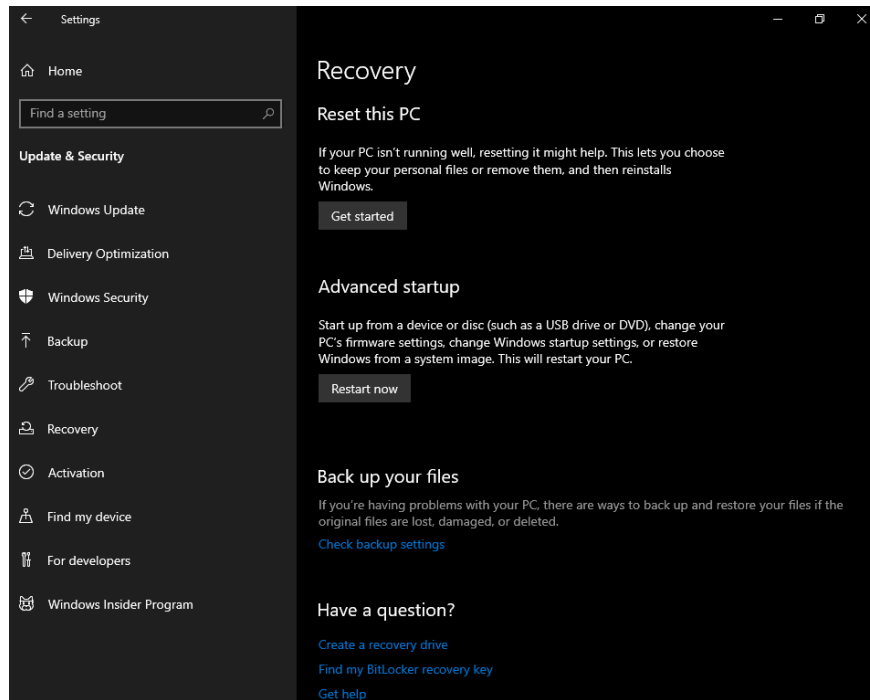

1. From now on, Windows 10 will automatically set aside 7GB of space on the system for updating the new version

2. Increase the limit of FLS Slot

The processing limit of FLS (Fiber Local Storage) in version 19H1 is increased by Microsoft to help musicians easily load DAW (Digital Audio Workstations) more so that they can work more effectively with the music with the effect Deep response. In addition, increasing the FLS Slot limit also has a positive impact on every application and software that loads hundreds of DLLs that are statically linked to the Visual C ++ runtime.

3. Change the Reset this PC interface

Reset this PC settings interface (at Settings -> Update & Security -> Recovery) has also been redesigned to reduce the number of clicks over the past.

4. Improved Windows Subsystem for Linux (WSL) Command Line Tool

This new update adds a number of new command line options to the WSL command line tool (wsl.exe) that makes managing WSL easier. In addition, Microsoft also added some other functions based on user feedback.

5. Improve performance, fix errors from previous versions.

Note: Windows 10 build 18312 update is in the process of testing, so there are many serious errors that can affect the user experience. Therefore, you should consider carefully before updating.

Download Windows 10 Insider Preview build 18312

If you have joined the Insider Fast from the Windows Insider Program, you can access the Settings (Windows + I) -> Update & Security -> Windows Update to search and upgrade to the latest update.
