The former chief technology officer of an OLPC Mary Lou Jepsen Laptop Per Child Project has set up a company dedicated to producing laptops that cost less than \$ 100.

Pixel Qi's goal is to research the production of a \$ 75 laptop while improving the line of low-cost, energy-saving laptops, mobile phones and electronic devices. Other consumer.

Lou Jepsen officially left OLPC two weeks ago with the aim of commercializing the technology that she had invented with her colleagues at the project. It is a screen technology that automatically adjusts operation under low power supply conditions.

Ms. Jepsen's company will continue to work with OLPC. However, OLPC will now pay a fee if you want to use Pixel Qi's product. In addition, the company will also sell products to other commercial organizations.

' Because OLPC will allow me to develop new low-cost notebooks and bring new technology to a wider audience ,' Jepsen said. ' In my opinion, the demand for OLPC technology is relatively large. Lowering hardware costs is possible if we allow multiple users to have access to advanced technologies . '

In 2005 the OLPC project officially launched XO laptop products for children at a price of only \$ 100. But since then, the project has continued to postpone production and continue to increase selling prices. So far the price of XO Laptop has reached nearly 200 USD.
