

These are exclusive features only available on Windows 11 Copilot+ PCs

June 18, 2024 is a memorable date in the technology world - a milestone marking the launch of the first wave of PC Copilot+.

Windows 11 computer generation is equipped with Qualcomm's latest Snapdragon X Series processor. These devices promise to bring many advantages: Improved power efficiency, better battery life and especially a series of exclusive features that users will not be able to find on PC lines. other.

If you're planning to buy a Copilot+ PC, here are all the cool features that only you will have the chance to experience, at least for now:

Cocreator feature in Paint

This feature makes creating AI images simpler, more fun, and more personalized. Simply create scribbles on the canvas in Paint, and Cocreator will harness the power of AI to add details to your drawing. The algorithm will also automatically apply the necessary corrections, adjusting the output in real time. You can refer to the video below to better understand how this feature works.

Note that Cocreator requires signing in with a Microsoft Account.

Image Restyle and Image Creator

These are two new AI features added to the Microsoft Photos app on PC Copilot+ that apply AI-based filters to your photos. You can choose one of the pre-made filters, or describe your own filter with text prompts.

Similar to Cocreator in Paint, Image Restyle requires a Microsoft Account.

Live Captions and Translations

PC Copilot+ can use the Neural Processing Unit (NPU) to process any audio passing through the computer, and create live captions or translate them from 44 languages into English (other languages are not yet supported). You can try out Live Captions by turning it on from the Start menu, and let AI do the rest.

Effects in Windows Studio

These effects can help you look more beautiful while making video calls or recording videos. You can apply background blur, reduce background noise, use various filters, adjust lighting, adjust eye contact (good when reading from a teleprompter), etc. You can preview Windows Studio Effects effects from the Quick Settings menu in the notification area.

Recall

Recall is the only feature that is not currently available, but is highly anticipated because of the fun it brings. Privacy issues and compatibility errors forced Microsoft to delay its release. In a nutshell, Recall is a feature that gives your computer a photographic memory - it literally takes a snapshot of everything you do on your computer so you can rewind at any time and look up things using natural language. course.

The first Copilot+ PCs to hit the market include models from Microsoft itself (Surface Pro 11 and Surface Laptop 7), Samsung, ASUS, Lenovo, etc.
