

# Things to avoid when choosing a teaching assistant

If you are planning to own a teaching assistant, please refer to our article below to avoid mistakes below.

Teaching aids are a small device, used to replace loud and heavy speakers and amplifiers. Thanks to the outstanding features, this device is gradually being chosen by many people, especially with teachers and tour guides.

But how to choose this product? It should be noted what points, not everyone knows. If you are planning to own a teaching assistant, please consult our article to avoid mistakes below.

## I. Benefits of teaching aids

1. Help teachers not to speak loudly when teaching. For teachers who have to teach regularly, the ability to speak is very important, no matter how good health is, talking loudly will be very tiring.
2. Helping listeners easier to hear, especially in large meeting rooms, large lecture halls .
3. Limiting being hoarse, sore throat or throat diseases when speaking a lot.
4. Music can be opened or a recorded recording is available for students to listen to when needed.

## II. Points to avoid when buying teaching aids

### 1. The bigger the machine, the louder

Usually people have the idea that the greater the teaching aid, the bigger the sound will be. However, it was true only in the past, today in the technological age, companies are always racing to launch ultra-small, ultra-thin

products, so this is no longer valid, no longer true.

The best teaching aids should have a capacity of between 10W - 20W to ensure the sound size. Big or small size of the device will depend on user preferences. The size of the product depends on the preferences of each user. It is best to choose teaching aids of small size to facilitate carrying and moving, fashion is also more beautiful. At the same time, it will help users to be professional and luxurious, create sympathy from the listeners.

## 2. Costs are as cheap as possible

Choosing to buy a low-cost tutor will save you an initial amount of money. However, users may face many risks later as high risk of failure.

Low-cost machines often will not have a clear origin, so it is difficult to find replacement parts if they fail. In addition, anti-noise equipment is poor, so I hear many noise like howling, hissing .

## 3. The longer the charging time, the longer the use will be

Many people have a perception that the charging time will be proportional to the time of use, so users will often try to plug in after fully charging the battery. However, this is quite a misconception, this habit can cause the assistant's battery to be bottled and reduce the life expectancy quickly.

## 4. No need to choose a big brand

Currently on the market the teaching aids are very rich, the brand's popularity is proportional to the price. Many people want to buy products at affordable prices, so it's easy to accept brands that don't have a clear origin.

However, when products encounter quality problems, users realize the importance of reputable brand products. Products will be maintained, spare parts are always quality assured. Products of major brands that have passed the test of the authorities, are certified to be safe for health, avoid headaches, earaches because they have to listen to a lot of noise.

## 5. The louder the sound, the better the sound quality

The teaching assistant has the main function of amplifying the sound, so that the user does not need to speak loudly but still communicates clearly to the listener. But many users only pay attention to the "big" factor, not paying attention to "clarity".

This causes many people to choose a machine at the place of purchase, to see loud language, when used regularly, the machine is shrieking, hissing, uncomfortable for both listeners and speakers. So when buying a device, besides the loudness of the voice, pay attention to the sound quality.

## III. Top best teaching aids today
