

What you need to know about the Huawei Watch GT 6 series

Watch GT 6 is Huawei's latest smartwatch line with a long battery life and useful features. Below is the design, configuration and information you need to know about Huawei Watch GT 6.

Watch GT 6 is Huawei's latest smartwatch line with a long battery life and useful features. Below is **the design, configuration and information you need to know about Huawei Watch GT 6**.

Huawei Watch GT 6 design

The Huawei Watch GT 6 series will continue to have a geometric dial, giving a sporty feel when worn on the wrist. The dial is rounded with impressive black and golden brown tones.

The product will use advanced materials to improve durability when used in outdoor sports modes, underwater and other harsh conditions. The Pro version will likely continue to use aerospace-grade titanium alloy.

Huawei Watch GT 6 Colors

Users will likely have more color options for the Huawei Watch GT 6, specifically as follows:

1. **Watch GT 6:** Rose Gold, Purple, Saddle Brown, White, and Jet Black.
2. **Watch GT 6 Pro:** Ice Gray, Amber Brown, Titanium Silver, Green, and Black.

Shades like gold, purple, silver, and green are new additions to the Watch GT 6 series. Perhaps the company is adding these tones to match the modern trend.

Huawei Watch GT 6 versions

The standard and Watch GT Pro versions come in two sizes: 41, 42mm and 46mm. However, Huawei is changing this tradition with the GT 6 series of smartwatches.

The Watch GT 6 Pro will only come in one size: 46mm. Meanwhile, the standard version will continue to have two options: 41mm and 46mm.

Outstanding features of Huawei Watch GT 6

Huawei has added some special features for cyclists and runners. The smartwatch now has a new Power Meter, which allows for quick tracking of cyclists' energy consumption. Some of the additional features include:

1. Key metrics like heart rate, incline, speed, and distance guide your workout on the go.
2. Course Positioning: 20% improvement in positioning accuracy through GNSS system and enhanced antenna frame.
3. Power Meter: Tracks average and real-time power to adjust your workout intensity. The device will continue to detect your important FTP metrics over time and track performance changes. You can sync the data to your bike computer for seamless analysis.
4. Running: You can run freely with offline maps and track high-level metrics like ground contact time balance and vertical oscillation.

Both wearables support IP69 standard, more than 100 sports modes, mental health features with the ability to detect up to 12 emotional states.

Huawei Watch GT 6 Battery

This is the biggest highlight of the Huawei Watch GT 6 series. Unlike Apple and Samsung, which only support battery life from 42 to 100 hours in battery saving mode, Huawei's latest wearables can operate continuously for 21 days without charging.

Both wearables can last for 21 days with light use, 12 days with regular use, and 7 days with AOD on. Meanwhile, the 41mm version supports 14 days with light use, 7 days with regular use, and 5 days with AOD on.

The Watch GT 6 Pro comes with a few more sensors than the standard version. Such as an ECG sensor and a depth sensor. The device also supports the enhanced TruSense Health system.

Huawei Watch GT 6 Price

In Vietnam, the Huawei Watch GT 6 series will be available from October 2 with prices starting from VND 7.69 million for the Pro version and from VND 4.99 million for the regular version.
