

This concept shows that Windows 7 2018 will be even better than Windows 10

Windows 7 has plans to stop support since January 2020 but will still be used by many users.

Windows XP is one of Microsoft's most popular operating systems and is still in use even though it has been discontinued for more than 2 years. That is the living proof for Windows 7, though it has been planned to stop support since January 2020 but will still be used by many users.

Stopping support doesn't mean Windows 7 will be ugly and forgotten. A new concept video revealed that the new version of this OS integrates many of the features available on Windows 10, making this old OS "more modern" with Microsoft's latest features.

Apple's macOS Mojave-inspired wallpaper is also available on this version of Windows 7 2018, showing that even Windows can automatically change the background over time.

1. How to automatically change wallpaper in real time Windows 10

Although the idea is great, Microsoft has never released a remastered version for any of its platforms. The closest is Windows 8.1, basically Windows 8 with a Start menu. Therefore, Microsoft will probably never develop Windows 7 Remastered Edition and it is certain that Microsoft will not have the opportunity to bring Windows 7 back to its heyday. Microsoft is doing everything possible to convince users to switch from Windows 7 to Windows 10. Windows 10 is now what they focus on in the desktop OS world and this will not change in the future.

According to reports from Woody Leonhard on CW, some older PCs will not receive updates or security patches on Windows 7. Accordingly, Windows 7 machines that do not support SSE2 have been blocked with new updates and sources said. Pentium III machines are affected, starting from March Windows 7 Monthly Rollup KB4088875. Although promising a monthly patch, June 2018 Monthly Rollup introduces a new policy that requires users to 'upgrade the machine to a processor that supports SSE2 or virtualize the machine'.

Even so, Windows 7 is still a "big love" for PC users. There are also third-party themes that bring up the look of Windows 10. Even though you'll need a lot of customization, if you don't like the modern Fluent Design and UI, it's worth it.

Whether or not this version of Windows 7 can be released, it does give Microsoft some great ideas that can be integrated on Windows 10, such as animated wallpapers. Let's wait and see if loyal Windows 7 fans can be convinced by Microsoft with new features on Windows 10 .
