

This fall will feature an integrated 3G Eee PC

The Asus manufacturer has recently said it will be welcomed by the end of September when the European market will welcome the first Eee PC 3G.

The Asus manufacturer recently said it would be welcomed by the end of September that the European market will welcome the first Eee PC to integrate 3G wireless networking technology.

Expected 3G technology will be used by Asus for Eee PC will be HSDPA high-speed data transfer technology.

After the Eee PC officially launched soon Asus revealed that it is working to find a solution to integrate 3G technology into this line of low-cost computers.

And if the above statement becomes true, Asus has taken exactly one year to fulfill that commitment.

But in that time, the direct competitor ECS has successfully completed the cheap G10IL laptop with a 10-inch screen that also incorporates HSDPA technology. IDG has confirmed that G10IL will be available in the market in October this year.

The fact that Asus decided to launch the Eee PC with 3G integration into the European market was not unusual because for example, there are a lot of mobile phone companies in France that have provided PC users. Cheap compact equipped with 3G USB Modem. This means that the 3G integrated Eee PC will have a fairly potential

consumer market.
