

This free Chrome plugin can be a savior for people with color blindness

Up to 10% of men experience some degree of color blindness.

According to the latest statistics of the World Health Organization, up to 10% of men are color blind to some extent, which can make it difficult to read charts as well as the type of scenes that appear. Complex display of many different colors. For example, in the chart below, people who are color blind will not distinguish the exact colors in each US state:

Or as in this example, people with red-blue blindness will not be able to read the numbers that appear in the middle of the image:

Thus, color blindness, whether in severe or mild form, causes considerable trouble and inconvenience for patients. Understanding that fact, a group of programmers created a completely free Google Chrome plugin tool, allowing people with color blindness to use Chrome extensions more easily.

This software, called Colorblind - Dalton, allows you to directly interfere with the color settings displayed on the Google Chrome browser and personalize the color settings on your own Chrome account to best suit.

Colorblind - Dalton gives people with color blindness, color recognition disorder (unable to recognize a specific color like Tritanopia (blue), Deuteranopia (green), Protanopia (red)) a total solution for using the internet in the most authentic way. Colorblind - Dalton can be turned on and off very easily with just a few simple steps and will support

There is also a color filter option in the settings (Under Settings> Ease of Access> Color filters) that allows you to adjust the filter to increase the contrast between different colors. This feature will interfere with the color presentation on the entire PC interface.

You can download Colorblind - Dalton at this address.
