In the new video posted on his personal twitter account, Bas Timmer showed the process of Call of Duty game play: Modern Warfare 2 on the OnePlus 6T with Windows 10 operating system quite stable, the lag phenomenon is not much. Since in the video we only see Bas Timmer's character without the appearance of any other player or virtual character, we cannot make any conclusions about the machine's performance.

However, Bas Timmer can install and play a PC game on a smartphone that shows that smart phones and chipset systems can do many things that few people can expect. I don't know what kind of interesting things he will do on his OnePlus 6T in the near future, let us wait and see.
