

This is how to speed up Edge browser

Like other browsers, Chrome or Firefox. After a period of use, Edge browser will also slow down. So how to speed up Edge browser, please refer to the following article of Network Administrator.

Microsoft Edge browser is one of the new features integrated on Windows 10 and in the future it is very likely that this browser will completely replace Internet Explorer browser.

And like other browsers, Chrome or Firefox. After a period of use, Edge browser will also slow down. So how to speed up Edge browser, please refer to the following article of Network Administrator.

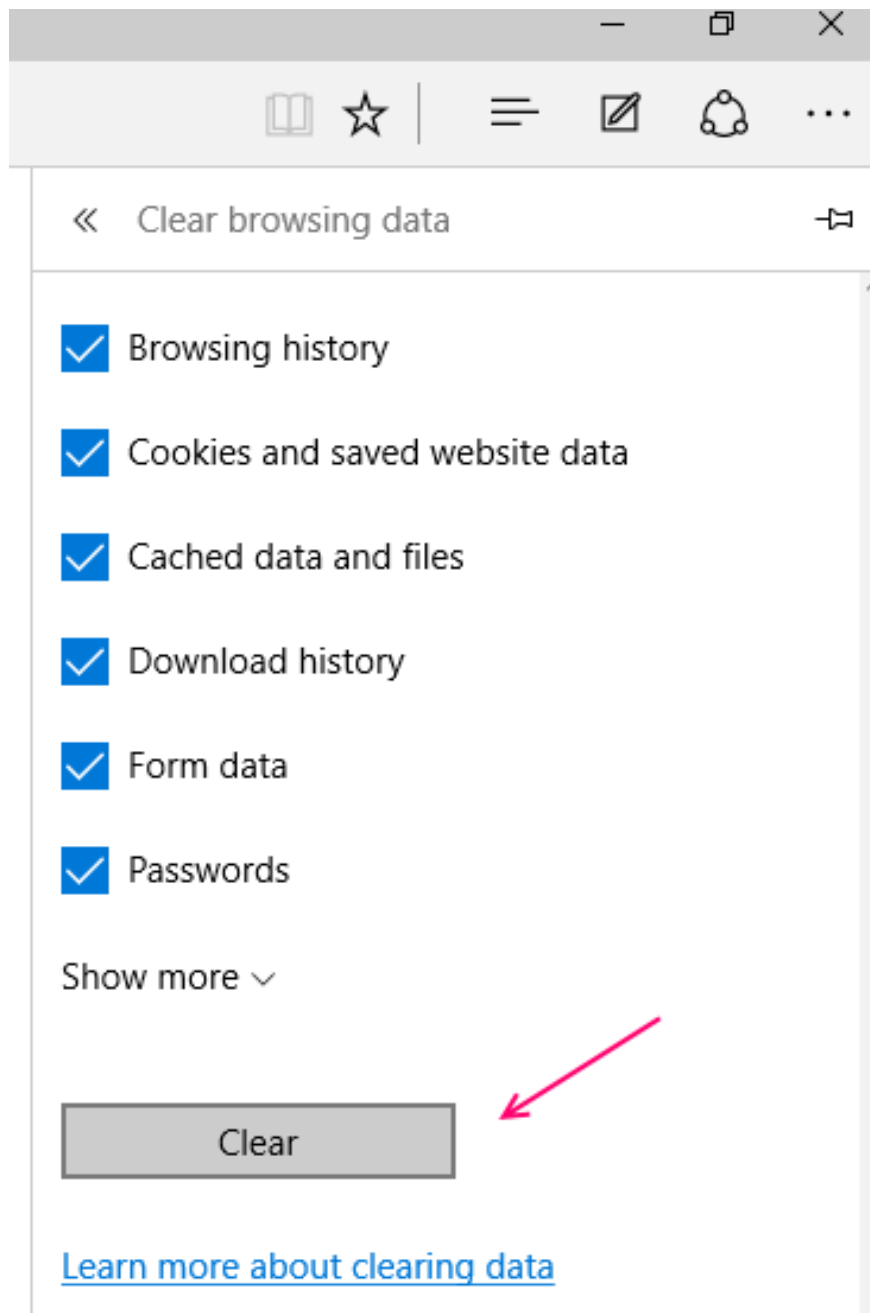

1. Clear the data and Edge browser cache

To delete data as well as Edge browser cache, follow the steps below:

First open the Edge browser, then click the 3 dots icon in the top right corner of the browser screen.

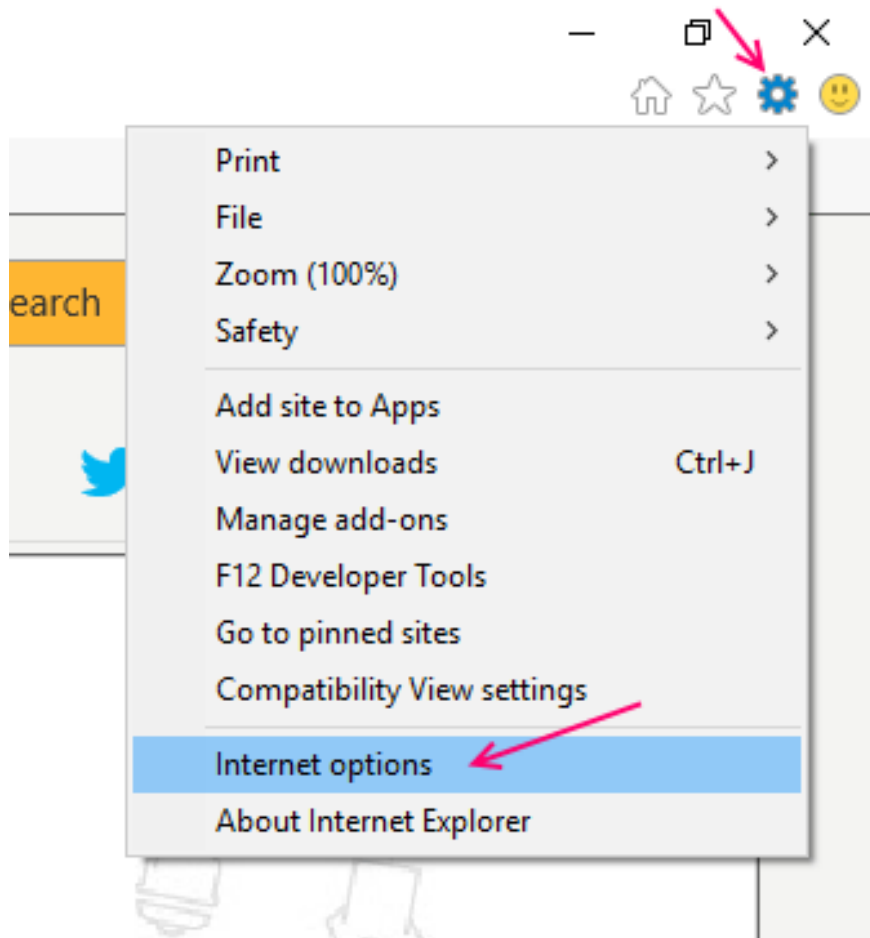

Now a menu appears on the screen, where you click **Settings**.

On the next window, click **What to clear**, then select **Cached data files** and **Browsing history** and then click the **Clear** button .

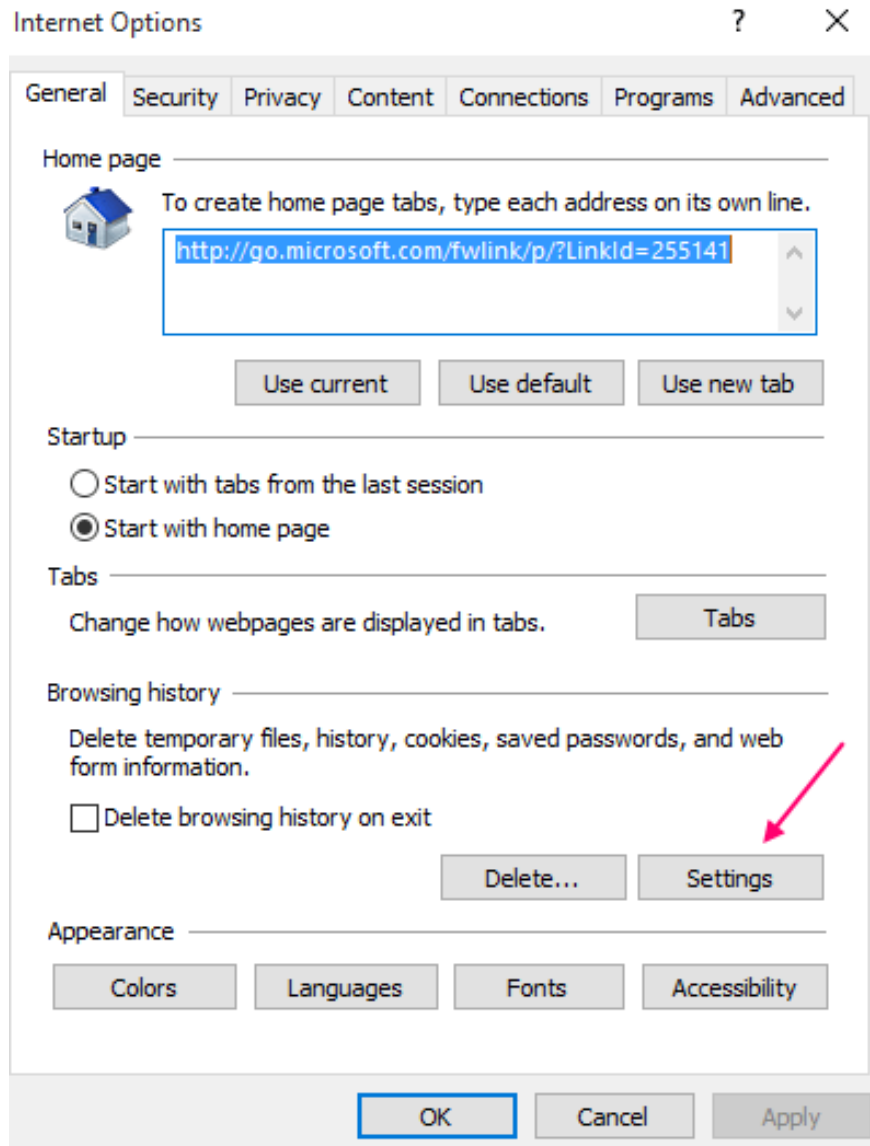

2. Change IE's temporary file location

First open Internet Explorer on your computer. Next click on the serrated icon in the top right corner of the browser window, select **Internet Options**.

On the Internet Options window, in the General tab, click **Settings**.

On the next window, find and click **Move Folder** in the bottom corner.

Select the location you want to move the folders into. Such as C: usersyour usernameTempint.

Assign 1024 to Disk space to use, then click **OK**.

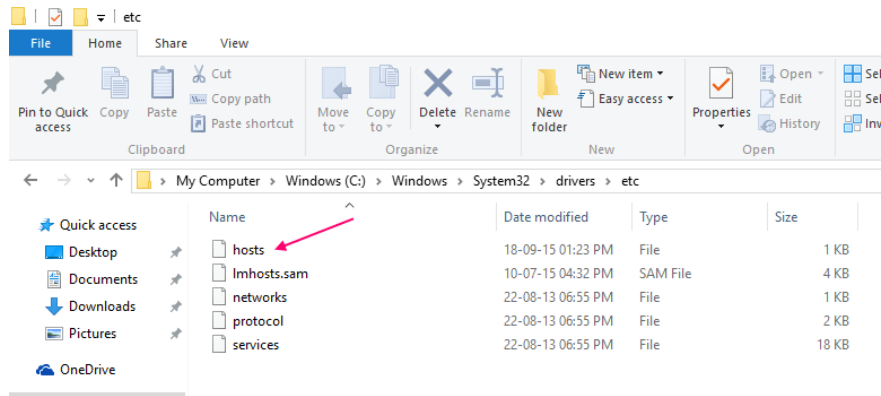

Restart your Edge browser again.

3. Reset the Host file

To reset the Host file, follow the steps below:

First open File Explorer, then enter the path below into the Search box in the address bar:

```
% systemroot% system32driversetc
```

Double click on "hosts" and open with Notepad.

Delete the entire contents of the Hosts file, copy the following code and paste it into the Hosts file:

```
# Copyright (c) 1993-2009 Microsoft Corp.

#

# Đây là m?t t?p tin HOSTS ???c dùng b?i Microsoft TCP / IP cho Windows.

#

T?p tin này ch?a mappings c?a IP ??a ch? ??n tên tên máy. Each
S? nh?p nên ???c gi? l?i ? m?t dòng này. C?n ??a ch? IP
# ???c ???t trong theo th? t? ??u tiên tr??c theo tên host t??ng ?ng.
# Tên ??a ch? IP và tên máy nên ???c g? b? ? ít nh?t m?t
# space.

#

Không thêm ???c, ý chú ý (nh? nh? này) có th? ???c inserted on nhân
# lines or theo tên máy này ???c g? b? b?i m?t '#' ký hi?u.

#

# For example:

#

# 102.54.94.97 rhino.acme.com # source server

# 38.25.63.10 x.acme.com # x client host
```

tênhost tên phân vùng là x? lý trong nó DNS.

127.0.0.1 localhost

:: 1 localhost

Note:

Before doing so, make sure to back up the old hosts file to avoid a bad case.

4. Reset Edge browser

To reset Edge browser, follow the steps below:

First copy and paste the link below into the Search Explorer address bar:

C: Users% username\AppData\Local\Packages\Microsoft.MicrosoftEdge_8wekyb3d8bbwe

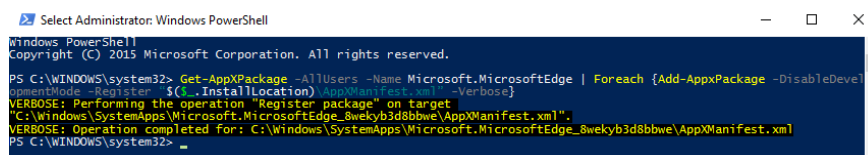

Note:

Replace % **username** with the username on your computer.

Next open Windows PowerShell (Admin), then copy and paste the following code into PowerShell window and press Enter:

```
Get-AppXPackage -AllUsers -Name Microsoft.MicrosoftEdge | Foreach {Add-AppxPackage -DisableDevelopmentMode -Register '$ ($_.InstallLocation) AppXManifest.xml' -Verbose}
```

After the process is finished, you will receive the message as shown below:

```
Select Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) 2015 Microsoft Corporation. All rights reserved.

PS C:\WINDOWS\system32> Get-AppXPackage -AllUsers -Name Microsoft.MicrosoftEdge | Foreach {Add-AppxPackage -DisableDevelopmentMode -Register '$ ($_.InstallLocation) AppXManifest.xml' -Verbose}
VERBOSE: Performing the operation "Register package" on target
"C:\Windows\SystemApps\Microsoft.MicrosoftEdge_8wekyb3d8bbwe\AppXManifest.xml".
VERBOSE: Operation completed for: C:\Windows\SystemApps\Microsoft.MicrosoftEdge_8wekyb3d8bbwe\AppXManifest.xml
PS C:\WINDOWS\system32>
```
