

This is how to surf Facebook, battery-free messaging and 3G

Swipe for Facebook is a very light Facebook application, allowing users to still reply to messages without having to install additional Messenger applications.

Facebook, along with Messenger, are the two applications on the list of most battery consuming devices. Even though we have disabled background running, that doesn't limit battery drain. There are quite a number of Facebook applications that help users still be able to message with friends, but save a lot more space, including Swipe for Facebook application.

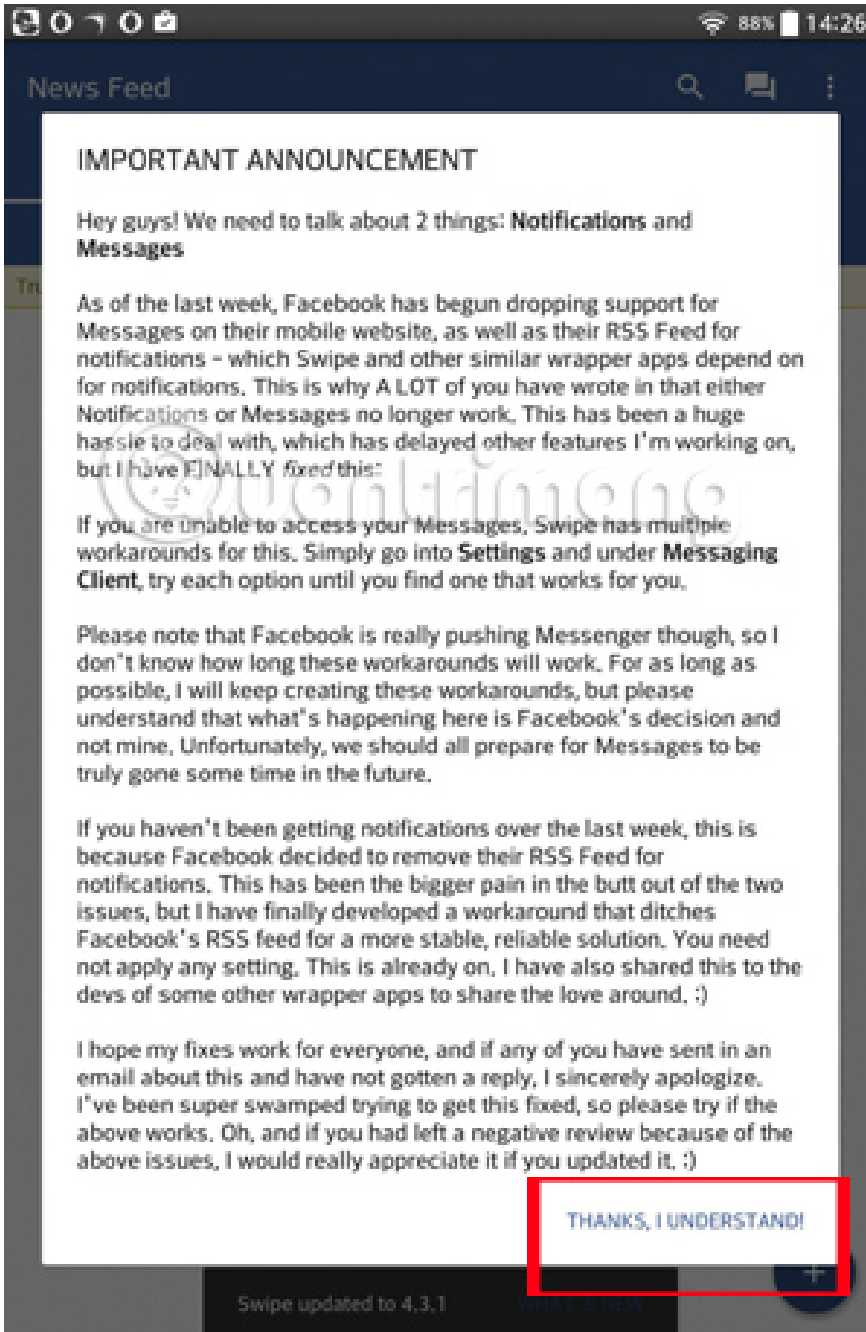

Swipe for Facebook has the same interface as the mobile version of Facebook, convenient for users. Besides, we can customize many features such as receiving notifications, changing the interface to suit your preferences, . In this article, we will guide you how to use the Swipe application. for Facebook for Android

Swipe for Facebook Facebook replacement app

Step 1:

First download the application using the link below. After that, we open the application will receive a notification, click Select **Thanks, I understand!** Switch to the new interface, you will **login to your personal Facebook account** .

1. Download the Swipe for Facebook app for Android

IMPORTANT ANNOUNCEMENT

Hey guys! We need to talk about 2 things: **Notifications and Messages**

As of the last week, Facebook has begun dropping support for Messages on their mobile website, as well as their RSS Feed for notifications - which Swipe and other similar wrapper apps depend on for notifications. This is why A LOT of you have wrote in that either **Notifications** or **Messages** no longer work. This has been a huge hassle to deal with, which has delayed other features I'm working on, but I have **FINALLY** fixed this:

If you are unable to access your Messages, Swipe has multiple workarounds for this. Simply go into **Settings** and under **Messaging Client**, try each option until you find one that works for you.

Please note that Facebook is really pushing Messenger though, so I don't know how long these workarounds will work. For as long as possible, I will keep creating these workarounds, but please understand that what's happening here is Facebook's decision and not mine. Unfortunately, we should all prepare for Messages to be truly gone some time in the future.

If you haven't been getting notifications over the last week, this is because Facebook decided to remove their RSS Feed for notifications. This has been the bigger pain in the butt out of the two issues, but I have finally developed a workaround that ditches Facebook's RSS feed for a more stable, reliable solution. You need not apply any setting. This is already on. I have also shared this to the devs of some other wrapper apps to share the love around. :)

I hope my fixes work for everyone, and if any of you have sent in an email about this and have not gotten a reply, I sincerely apologize. I've been super swamped trying to get this fixed, so please try if the above works. Oh, and if you had left a negative review because of the above issues, I would really appreciate it if you updated it. :)

THANKS, I UNDERSTAND!

Swipe updated to 4.3.1

Step 2:

Swipe for Facebook interface is no different than Facebook. When clicking on **the green circle icon** to the right of the interface will appear options: write status, check in, download photos or videos, share on Facebook.

You can still post status, add location, image as usual.

Step 3:

To text a friend, click on **the message icon** above. In the messaging view, click **View older messages** to read more messages. In addition, you can message, view archived messages or filtered messages, .

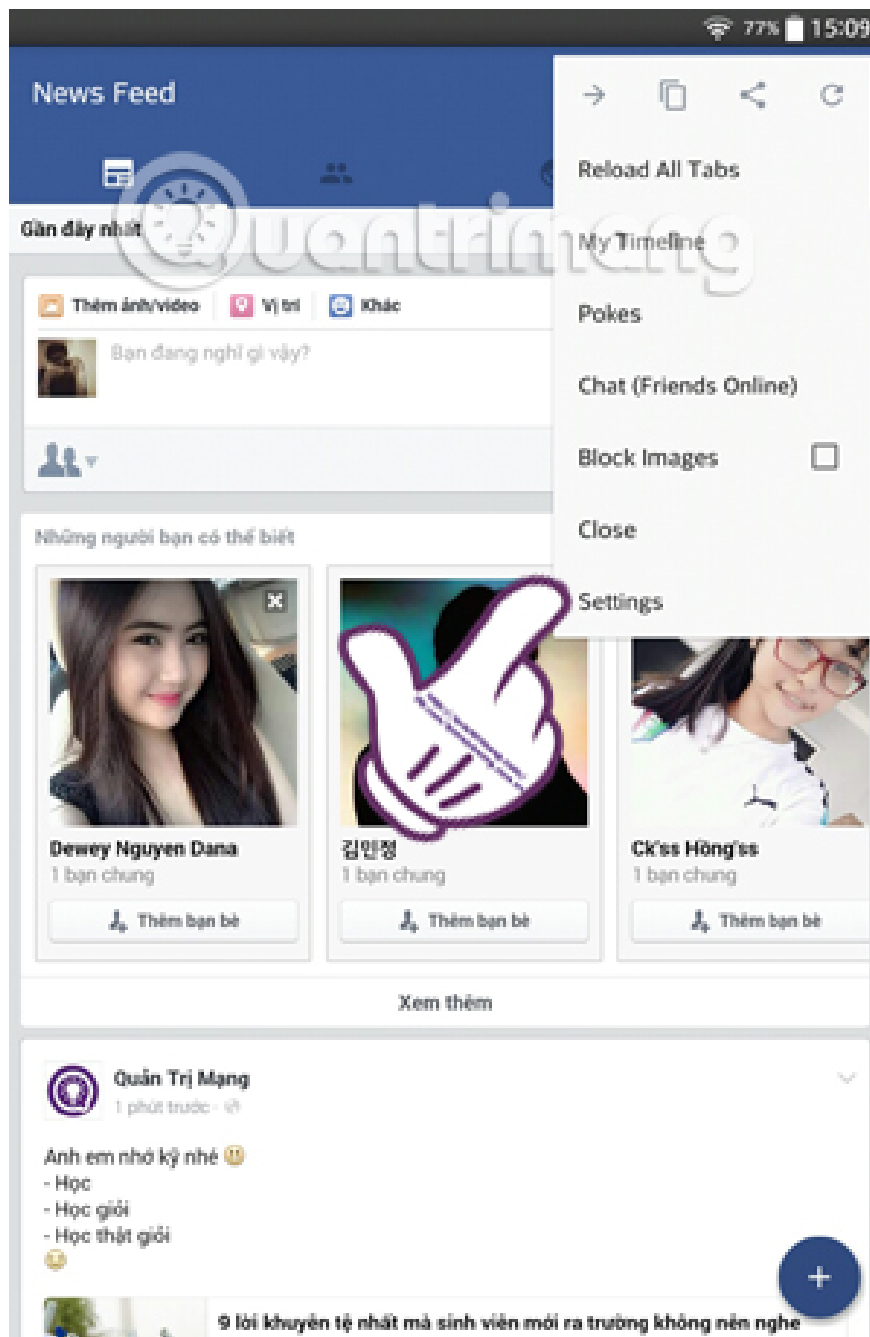

Step 4:

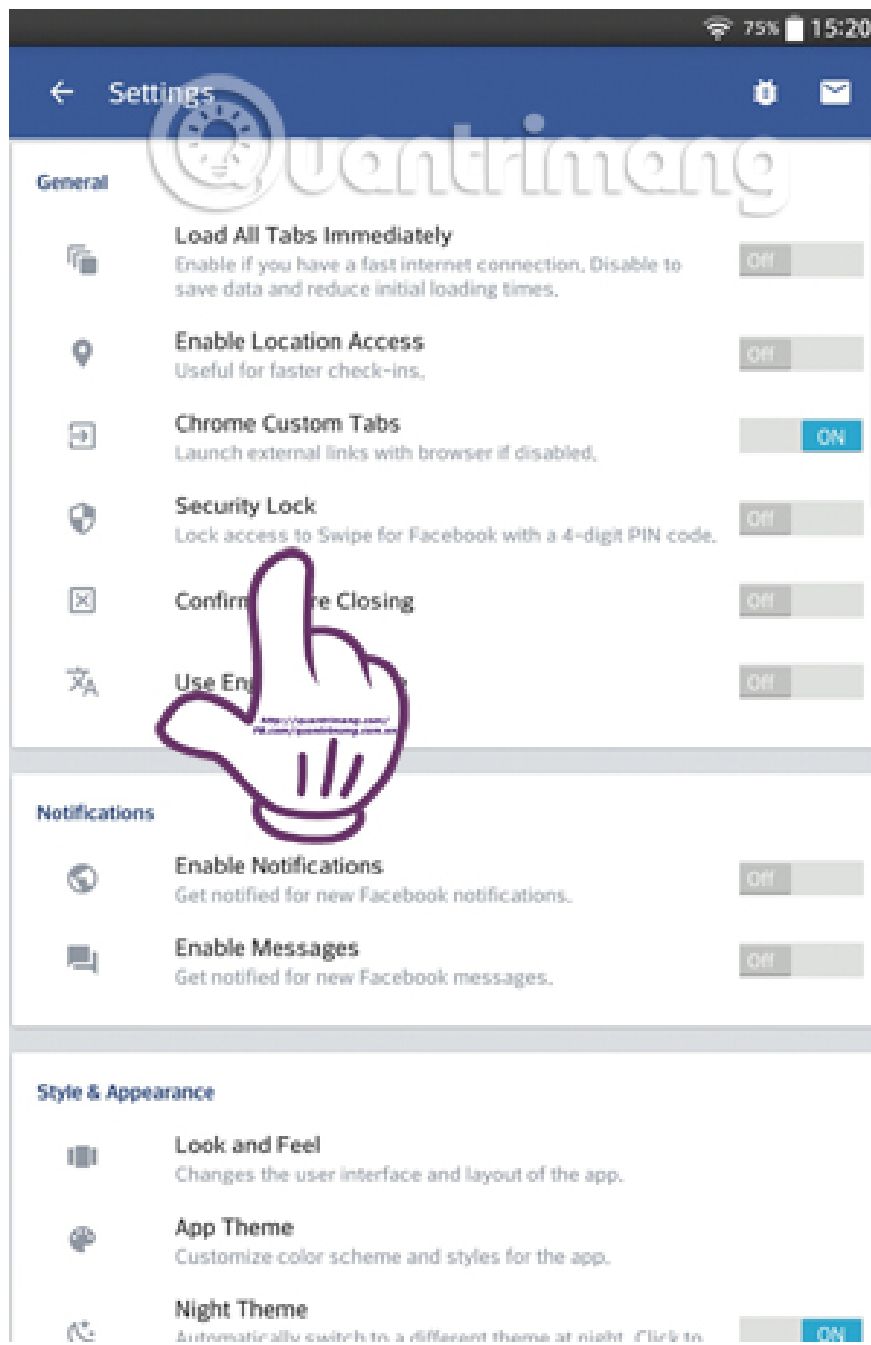

Readers click **the 3 dots icon** on the screen and select **Settings** to change some settings for the application.

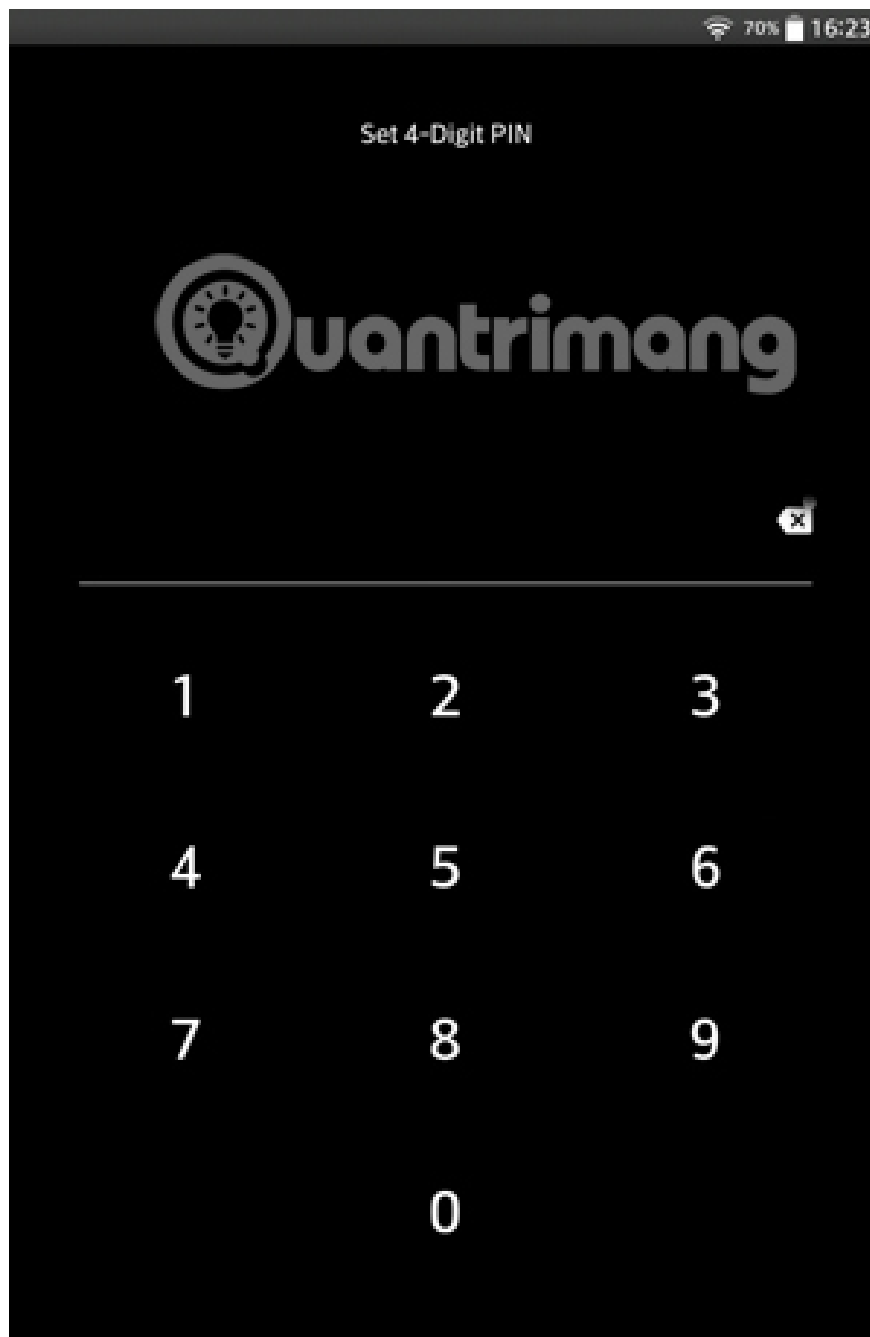

Step 5:

In the **General** section, you can choose to disable the **data loading in the background** (Load All Tabs Immediately), **turn off notifications** (Enable Notifications), **create application login passwords** (Security Lock).

In **Style & Appearance** , users can change the look of the application, such as: **Interface** (Look and Feel), **Application** Theme (App Theme).

Use English Language

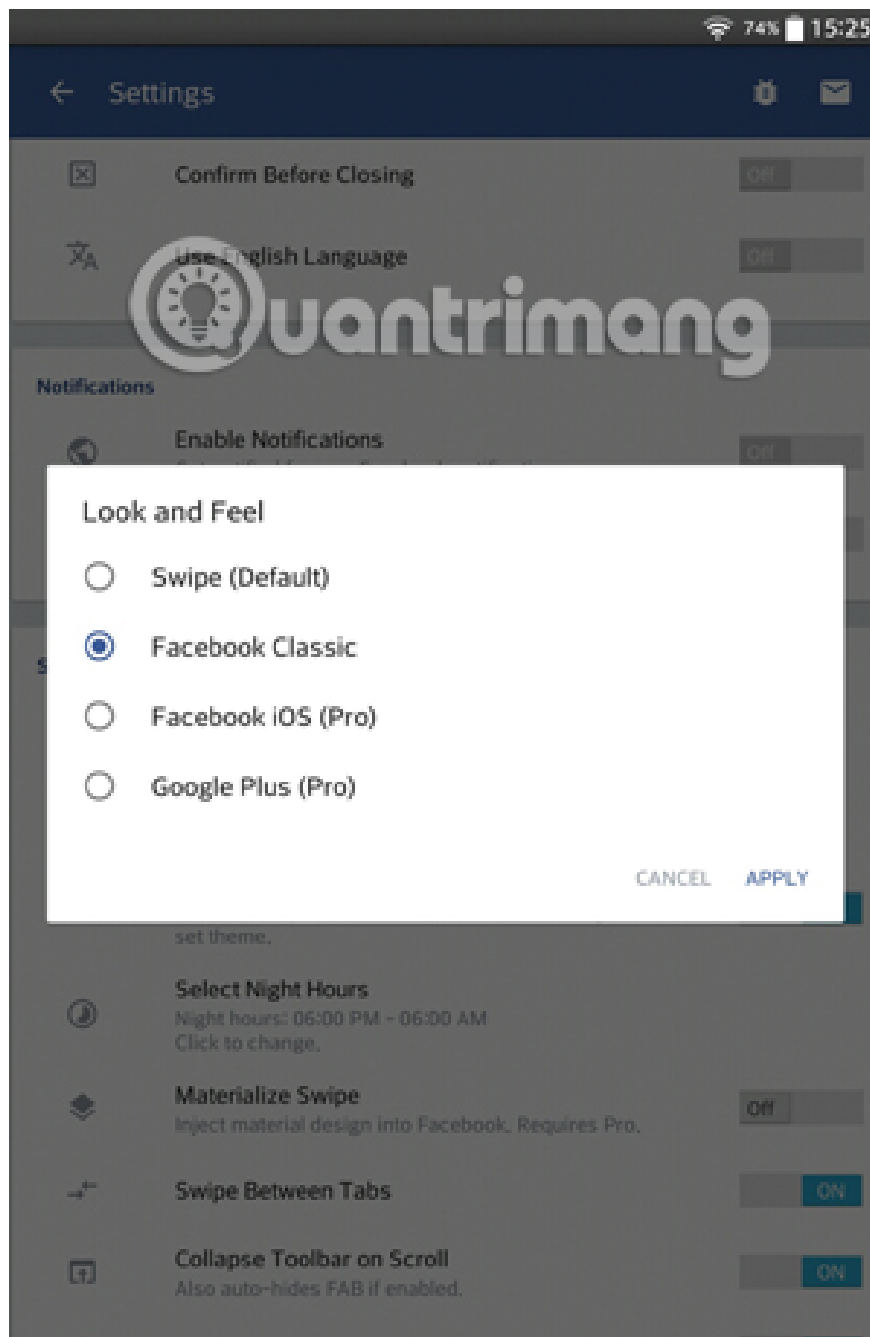

App Theme

- Facebook Blue
- Material Dark
- AMOLED Black
- YouTube Red (Pro)
- Whatsapp Green (Pro)
- LINE Lime Green (Pro)
- Keep Yellow (Pro)
- Twitter Cyan (Pro)
- Viber Purple (Pro)
- Reddit Slate (Pro)
- Ribbon Pink (Pro)

CANCEL APPLY

Collapse Toolbar on Scroll
Also auto-hides FAB if enabled.

Enable Floating Action Button

The above is a tutorial on using Swipe for Facebook application. With this application, we can still post emotional status, message comfortably with friends, . like when using the Facebook application. In particular, the application does not take too much capacity of the device, does not consume battery or 3G like Facebook or Messenger. But beware of users, some of the application's extended features will only be available on the Pro version. Try using Swipe for Facebook and experience many cool features.
