

This is Realme Band: Heart rate monitor, color screen, compete with Xiaomi Mi Band 4

Thanks to the USB-A port, users can plug Realme Band directly into the USB port on a computer or adapter to charge without using any other accessories.

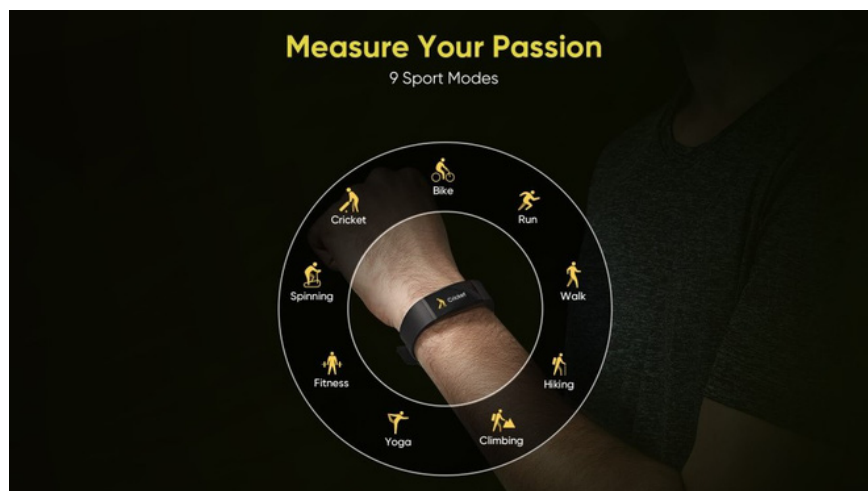

As expected, Realme - OPPO's sub-brand will officially launch the Realme 6 and Realme 6 Pro duo on March 5. In addition to smartphones, the Chinese manufacturer will also introduce the Realme Band health monitoring bracelet in the upcoming event. Recently, this product has suddenly appeared on Realme's website in India just before its launch.

On the official website, Realme only "teases" the features of the Realme Band and does not disclose specific specifications. The device will have a color screen, curved glass with a large size and three color options are Gold, Black and Blue. This screen can be used to view notifications, call information, messages and other notifications from the connected device.

The Realme Band is equipped with a heart rate monitor and sleep tracker. The product has 9 different modes of exercise, including cycling, jogging, walking, hiking, mountaineering, yoga, bodybuilding, spinning and cricket.

Like other products on the market, the Realme Band is a wristband that is water and dust resistant to IP68 standards. Thanks to the male USB-A port available, users can easily charge the device by plugging directly into the USB port on a laptop or adapter without having to use any other accessories.

Currently, there is no information on the price of Realme Band. This will be a direct competitor to Xiaomi's Mi Band, currently sold in India for Rs 2299 (about 740,000 VND).
