

# **This is the most dangerous domain name in the world at the present time, able to access the data of many companies**

That domain is corp.com, although only a blank domain name, does not contain any banned content but is the most dangerous domain name in the world at the present time. It is for sale for \$ 1.7 million.

That domain name is "corp.com", although only an empty domain name, does not contain any banned content but is the most dangerous domain name in the world at the present time. It is for sale for \$ 1.7 million.

Entrepreneur Mike O'Connor bought the domain "corp.com" along with many other domain names (like bar.com, pub.com, or place.com) more than 20 years ago. Over time, these domain names became more valuable and gradually sold by O'Connor. He retains only "corp.com".

According to the cyber security blog "Krebs On Security", the domain's 'corp' name makes it one of the most dangerous domain names in the world. It brings the potential for domain name owners to collect a lot of sensitive information (email addresses, password of officials accounts .) of businesses in the world.

The way the intranets of many businesses operate is the cause of this. Specifically, Windows computers connected to each other through the corporate intranet can recognize each other through the "Active Directory" protocol of Windows. The default path for early versions that support this protocol is also known as "corp". Thus, the domain names used in the intranet have the same name as an accessible domain name on the Internet.

Many companies around the world use the default settings for their intranet without making any modifications. This causes the company's computer to retrieve data from the "corp.com" page on the Internet when employees access the company's internal pages, leading to the domain owner "corp.com" to intervene. into those

connections to get sensitive information.

With that level of risk, O'Connor hopes Microsoft will acquire the domain name because Windows users will become victims if the domain name "corp.com" falls into the wrong hands.
