

# This is the perfect glass for office workers who plugged in their computers all day

As well as blocking 100% of blue light and turning it into fashionable sunglasses, Barner 2.0 is currently causing a fever in the Kickstarter community.

According to recent research, about 50 to 90% of people who use computers for more than 3 hours a day often have problems with their eyes, brain, neck and circadian rhythm. The main reason comes from the blue light emitted from the screens of electronic devices. Common symptoms include pain, fatigue, eye aches, headache, neck pain, sleep disorders and even macular degeneration.

These symptoms are collectively known as Computer Vision Syndrome (CVS). They are silently affecting our lives, but many people tend to disregard, ignore them and will pay dearly when it's too late.

Blue light from computer screens and phones seems harmless but is a cause of many health problems.

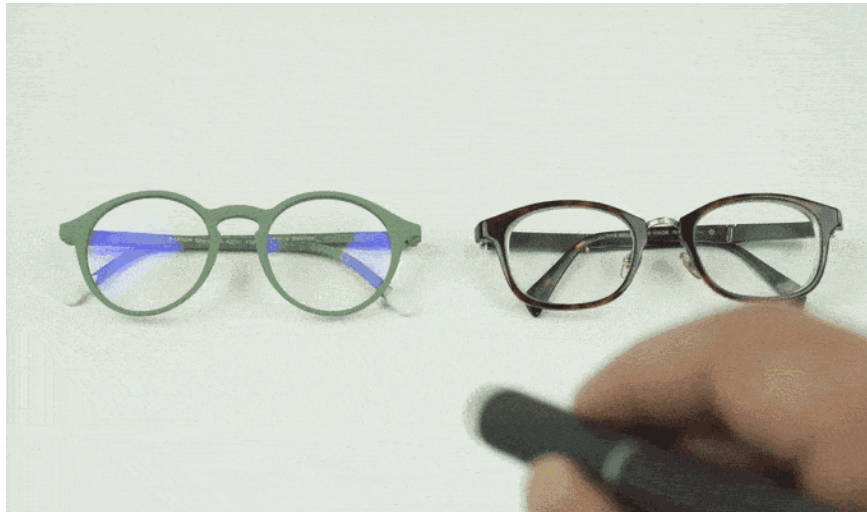

A number of solutions have been put in place to mitigate this problem, the most common of which is the blue light filtering feature built into devices such as phones and computers. However, this is only a temporary solution, does not work completely.

Knowing this, Barner - a Spanish-based startup has developed special glasses, also named Barner, which allows 100% of the blue light to be emitted from the screen of electronic devices, Full user protection from related

issues.

In fact, this is the company's second product, called Barner 2.0. It has both the advantages of the previous generation and a more affordable price to reach more people. Therefore, Barner's capital raising project was completed in just one day and put on Kickstarter and promises to receive more contributions in the near future.

Simulate the ability of Barner 2.0 to filter blue light.

About Barner 2.0, the glasses have two frames to choose from, one square to fit the male and one soft round to suit the female. These two designs are designed in the style of London and Paris, bringing a sense of more fashionable but still good use in everyday life.

Barner 2.0 with square glasses .

. and this is the round form.

Version 2.0 is different from the previous generation in that the frames are now more flexible, cheaper materials but still good enough, increase grip on the bridge of the nose and fit snugly with many head sizes. In addition to the current 4 colors are black, pink, army green and 'turtle shell' with black / brown spots covering the rim. Barner will unlock new color versions when reaching the full stretch goal within the call period.

The most special thing about Barner 2.0 is the high-quality glass, which not only scratches, breaks, dust and water, it also filters 40% of the blue light in the harmful spectrum and 100% blue light. at 410nm. The key to Barner doing this lies in the exclusive coating on each of their own developed lenses.

The accessories that come with each Barner 2.0 include the same color case, soft cloth for cleaning glasses and a neck strap.

In addition, Barner 2.0 version also has an optional sunglasses for about 20 euros, attached directly to the frame to quickly turn ordinary glasses into stylish sunglasses. That is, you only need to buy 1 frame can be used indoors and outdoors.

Clip-on sunglasses are also an attractive accessory in recent times.

Currently, each Barner 2.0 is being sold for from 39 Euro, equivalent to more than 1 million. If you want more sunglasses, you will have to spend 1.6 million. Larger packages are also available at a cheaper price of 1250 Euro for 25 pairs of sunglasses + frames, equivalent to over 1.3 million VND. If you are nearsighted, confused or farsighted, you can also register for a test to buy the right type for 30 Euro. Products are expected to be delivered from February 2019.

For other information about Barner 2.0, you can see more at the capital call page on Kickstarter.
