

This is why the new emoji doesn't work on your Windows 10 Fall Creators Update

Version Windows 10 Fall Creators Update officially released on October 17 has been integrated with a new emoji set that allows users to easily enter emoji emoticons into text fields on the application and other places. in the operating system. However, many users cannot use it. So what is the cause? Let's find the answer in the article!

Version Windows 10 Fall Creators Update officially released on October 17 has been integrated with a new emoji set that allows users to easily enter emoji emoticons into text fields on the application and other places. in the operating system with Windows + Period shortcut. The new emoji also has a search feature that allows you to search specific emoticons and use them with the keyboard easily.

However, many users who have upgraded to Fall Creators Update version cannot use Microsoft's new emoji. So what is the reason? That's because this new emoji is only available to users in the United States at the present time. Users with primary language settings en_US can also use this feature even if they do not live in the United States.

1. Have you updated Windows 10 Fall Creators Update on October 17?

Microsoft does not reveal why the emoji is limited to US users, but it may be restricting this feature because the name of the emoji needs to be translated into many other languages. The company said that this feature will be adapted into many languages ??in the future with new updates to the present, it is only available for a certain number of users.
